

Pfizer-BioNTech COVID-19 Vaccine

Beyond Use Date/Time (BUD) Tracking Label for Vaccine During Refrigerator Storage

Before mixing, COVID-19 vaccine (Pfizer) may be stored in the refrigerator between 2°C and 8°C (36°F and 46°F) for up to 120 hours (5 days).

1. Place vaccine vials removed from frozen storage at the same time together in a resealable plastic bag or similar container.
2. Complete the information on the storage label and attach it to the container holding the unmixed vaccine vials.
3. Once labeled, store unmixed vaccine vials upright in the refrigerator between 2°C and 8°C (36°F and 46°F).

After 120 hours (5 days), remove any remaining vials from the refrigerator and discard. Follow the manufacturer's and your jurisdiction's guidance on proper disposal.

Do **NOT** keep vials together that were removed from frozen storage at different times.

Do **NOT** refreeze thawed vaccine.

Note: Storage labels on page 2 are formatted to print on 4" x 3-1/3" adhesive labels. We are unable to format for other size labels. If this size label is not available, print on paper and tape to container holding the vaccine.

REMEMBER!

Use vaccine vials stored in the refrigerator **before** removing additional vials from the freezer.
