Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is the not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama

¹Per 1,000 population. ²Total rate per 1,000 females 15-44.

³Age-specific rate per 1,000 females in age group.

⁴Percent of total births.

⁵Percent of all teen births.

⁶Per 100,000 population. ⁷1998 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is the not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

Per 1,000 population.

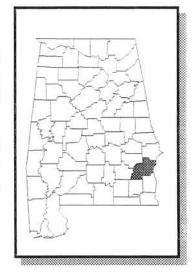

²Total rate per 1,000 females 15-44. ³Age-specific rate per 1,000 females in age group. ⁴Percent of total births.

⁵Percent of all teen births. ⁶Per 100,000 population. ⁷1998 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is the not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

⁵Percent of all teen births. ⁶Per 100,000 population. ⁷1998 data.

¹Per 1,000 population. ²Total rate per 1,000 females 15-44. ³Age-specific rate per 1,000 females in age group. ⁴Percent of total births.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is the not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

¹Per 1,000 population. ²Total rate per 1,000 females 15-44. ³Age-specific rate per 1,000 females in age group. ⁴Percent of total births.

⁵Percent of all teen births. ⁶Per 100,000 population. ⁷1998 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is the not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

⁵Percent of all teen births. ⁶Per 100,000 population. ⁷1998 data.

¹Per 1,000 population. ²Total rate per 1,000 females 15-44. ³Age-specific rate per 1,000 females in age group. ⁴Percent of total births.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is the not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

¹Per 1,000 population. ²Total rate per 1,000 females 15-44. ³Age-specific rate per 1,000 females in age group. ⁴Percent of total births.

⁵Percent of all teen births. ⁶Per 100,000 population. ⁷1998 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is the not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

Per 1,000 population.

Total rate per 1,000 females 15-44.

Age-specific rate per 1,000 females in age group.

Percent of total births.

⁵Percent of all teen births. ⁶Per 100,000 population. ⁷1998 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is the not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

¹Per 1,000 population. ²Total rate per 1,000 females 15-44. ³Age-specific rate per 1,000 females in age group. ⁴Percent of total births.

⁵Percent of all teen births. ⁶Per 100,000 population. ⁷1998 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is the not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

¹Per 1,000 population. ²Total rate per 1,000 females 15-44. ³Age-specific rate per 1,000 females in age group. ⁴Percent of total births.

⁵Percent of all teen births. ⁶Per 100,000 population. ⁷1998 data.
