

Bronchopulmonary Dysplasia: Nobody Puts Baby in the Corner

Satellite Conference and Live Webcast
Thursday, April 20, 2023 12:00-1:00 p.m. (Central Time)
1:00-2:00 p.m. (Eastern) • 11:00 a.m.-12:00 p.m. (Mountain) • 10:00-11:00 a.m. (Pacific)

Bronchopulmonary dysplasia is the second most common pediatric lung problem affecting 10-15 thousand infants annually. Originally described in 1967, the definition of BPD has evolved to describe the treatment required to support post-premature respiratory disease. There are multiple pre- and post-natal risk factors for developing BPD. Currently, an insufficient number of children with bronchopulmonary dysplasia are prescribed inhaled steroids and/or albuterol. A multi-disciplinary approach to care for infants with BPD and their families in the outpatient setting improves outcomes.

Region IV Public Health
Training Center

PROGRAM OBJECTIVES

1. Review the definitions of BPD and severity.
2. Discuss the changes in BPD pathology over the past few decades.
3. List the risk factors for developing BPD.
4. Describe strategies to reduce the risk of BPD.
5. Discuss comorbidities of BPD.
6. Describe the guidelines for outpatient management of BPD.
7. Discuss our clinic the routine counseling we give our families.

FACULTY

Dr. Christopher Miles Fowler

Assistant Professor
Division of Pediatric Pulmonary & Sleep Medicine
University of Alabama at Birmingham

Ms. LeJasmine Gary

Mother of Twins with Bronchopulmonary Dysplasia (BPD)

CONFERENCE DETAILS:
