The Morbidity and Mortality Weekly Report (MMWR)* recently released the 2015 National Immunization Survey-Teen (NIS-Teen) data, which provides national, state, regional, and selected local area estimates of vaccination coverage. As reported in the MMWR, “In 2015, coverage with each HPV vaccine dose increased among males, however, among females, ≥1 dose HPV vaccination coverage increased only modestly, and no change was observed in coverage with ≥2 and ≥3 HPV doses.” As in prior years, coverage with ≥1 HPV vaccine dose was lower than coverage estimates for two other vaccines routinely recommended at age 11–12 years, highlighting ongoing missed opportunities for HPV vaccination when other recommended vaccines are administered. Next year, a revised Healthcare Effectiveness Data and Information Set (HEDIS) measure will be implemented to evaluate receipt of the three recommended vaccines by age 13 years in females and males combined in one composite indicator,** facilitating health plans’ and providers’ assessment of their performances in administering these vaccines on time to adolescents. See page 2 of this report for 2015 NIS-Teen vaccination coverage, as well as a data summary for Alabama.

### 2016 HPV Vaccine Distribution Trends in Alabama

Below are available year-to-date totals of CDC and non-CDC distributed HPV vaccine doses of Gardasil and Gardasil 9 in your state or city. CDC recommends examining vaccine distribution data for trends to approximate recent HPV vaccine administration, as distribution data can inform action in real time to increase vaccination.

#### Year-to-date Total of Distributed¹ Gardasil and Gardasil 9 HPV Vaccine Doses in Alabama (2012–2016)

![Graph showing year-to-date vaccine distribution trends](image)

**Note:** Cervarix doses, which represent less than 1% of the HPV vaccine doses distributed in the United States, are not included in this report.

To assess vaccination coverage among teens aged 13–17 years, CDC analyzed the 2015 NIS-Teen survey data collected through questionnaires completed by vaccination providers following consents by interviewed parents or guardians.

Abbreviations: Tdap= tetanus toxoid, reduced diphtheria toxoid, and acellular pertussis vaccine; MenACWY= quadrivalent meningococcal conjugate vaccine.

### 2015 NIS-Teen HPV Data Summary: Alabama

Compared to estimates from 2014, HPV vaccination coverage in Alabama:
- Did not change significantly from 2014 to 2015 among females. There were non-significant increases in ≥1, ≥2, and ≥3 dose coverage among females.
- Significantly increased from 2014 to 2015 in ≥1, ≥2, and ≥3 dose coverage among males.

Consult this CDC-authored publication for information on interpreting survey findings:

### Resources to Increase HPV Vaccination Coverage

- Get involved with partners, such as the American Cancer Society (ACS). Information on the National HPV Vaccination Roundtable can be found at:
  http://www.cancer.org/healthy/informationforhealthcareprofessionals/nationalhpvvaccinationroundtable/
- View the latest #PreteenVaxScene webinar, “Research Project Update: AFIX Program Strategies for Improving HPV Vaccination Rates in the Field”:
