

ORDINANCE NO. 2009-5**AN ORDINANCE OF THE CITY OF TUSKEGEE, ALABAMA REGULATING SMOKING IN WORK PLACES AND PUBLIC PLACES**

BE IT ORDAINED by the City Council of the City of Tuskegee, Alabama as follows:

SECTION 1. Title.

This article shall be known as the City of Tuskegee Smoke free Air Ordinance of 2009.

SECTION 2. Findings and Intent.

The city does hereby find that:

(a) Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution, and that breathing secondhand smoke (also known as environmental tobacco smoke) is a cause of disease in healthy nonsmokers, including heart disease, stroke, respiratory disease, and lung cancer. The National Cancer Institute determined in 1999 that secondhand smoke is responsible for the early deaths of up to 65,000 Americans annually. (National Cancer Institute (NCI), "Health effects of exposure to environmental tobacco smoke: the report of the California Environmental Protection Agency. Smoking and Tobacco Control Monograph 10." Bethesda, MD: *National Institutes of Health, National Cancer Institute (NCI)*, August 1999.)

(b) The Public Health Service's National Toxicology Program (NTP) has listed secondhand smoke as a known carcinogen. (Environmental Health Information Service (EHIS), "Environmental tobacco smoke, first listed in the Ninth Report on Carcinogens," *U.S. Department of Health and Human Services (DHHS), Public Health Service, National Toxicology Program (NTP)* 2000, reaffirmed by the NTP in subsequent reports on carcinogens, 2003, 2005.)

(c) A study of hospital admissions for acute myocardial infarction in Helena, Montana before, during, and after a local law eliminating smoking in workplaces and public places was in effect, has determined that laws to enforce smokefree workplaces and public places may be associated with a reduction in morbidity from heart disease. (Sargent, Richard P.; Shepard, Robert M.; Glantz, Stanton A., "Reduced incidence of admissions for myocardial infarction associated with public smoking ban: before and after study," *British Medical Journal* 328: 977-980, April 24, 2004.)

(d) Secondhand smoke is particularly hazardous to elderly people, individuals with cardiovascular disease, and individuals with impaired respiratory function, including asthmatics and those with obstructive airway disease. Children exposed to secondhand smoke have an increased risk of asthma, respiratory infections, sudden infant death syndrome, developmental abnormalities, and cancer. (California Environmental Protection Agency (Cal EPA), "Health effects of exposure to environmental tobacco smoke". *Tobacco Control* 6(4): 346-353, Winter, 1997.)

(e) The Americans with Disabilities Act, which requires that disabled persons have access to public places and workplaces, deems impaired respiratory function to be a disability. (Daynard, R.A., "Environmental tobacco smoke and the Americans with Disabilities Act," *Nonsmokers' Voice* 15(1): 8-9.)

(f) The U.S. Surgeon General has determined that the simple separation of smokers and nonsmokers within the same air space may reduce, but does not eliminate the exposure of nonsmokers to secondhand smoke. (Department of Health and Human Services. *The Health Consequences of Involuntary Smoking: A Report of the Surgeon General*. Public Health Service, Centers for Disease Control, 1986.) The Environmental Protection Agency has determined that secondhand smoke cannot be reduced to safe levels in businesses by high rates of ventilation. Air cleaners, which are only capable of filtering the particulate matter and odors in smoke, do not eliminate the known toxins in secondhand smoke. (Environmental Protection Agency (EPA), "Indoor air facts No. 5: environmental tobacco smoke," Washington, D.C.: Environmental Protection Agency (EPA), June 1989.)

(g) The centers for disease control and prevention has determined that the risk of acute myocardial infarction and coronary heart disease associated with exposure to tobacco smoke is non-linear at low doses, increasing rapidly with relatively small doses such as those received from secondhand smoke or actively smoking one or two cigarettes a day, and has warned that all patients at increased risk of coronary heart disease or with known coronary artery disease should avoid all indoor environments that permit smoking. (Pechacek, Terry F.; Babb, Stephen, "Commentary: How acute and reversible are the cardiovascular risks of secondhand smoke?" *British Medical Journal* 328: 980-983, April 24, 2004.)

(h) A significant amount of secondhand smoke exposure occurs in the workplace. Employees who work in smoke-filled businesses suffer a twenty-five (25) to fifty (50) per cent higher risk of heart attack and higher rates of death from cardiovascular disease and cancer, as well as increased acute respiratory disease and measurable decrease in lung function. (Pitsavos, C. Panagiotakos, D.B.; Chryschoou, C.; Skourmas, J.; Tzioumis, K.; Stefanadis, C.; Toutouzas, P., "Association between exposure to environmental tobacco smoke and the development of acute coronary syndromes: the CARDIO2000 case-control study," *Tobacco Control* 11(3): 220-225 September 2002)

(i) Smoke-filled workplaces result in higher worker absenteeism due to respiratory disease, lower productivity, higher cleaning and maintenance costs, increased health insurance rates, and increased liability claims for diseases related to exposure to secondhand smoke. ("The high price of cigarette smoking," *Business and Health* 15(8), Supplement A: 6-9, August 1997.)

(j) Numerous economic analyses examining restaurant and hotel receipts and controlling for economic variables have shown either no difference or a positive economic impact after enactment of laws requiring workplaces to be smokefree. Creation of smokefree workplaces is sound economic policy and provides the maximum level of employee health and safety. (Giantz, S.A. and Smith, L. The effect of ordinances requiring smokefree restaurants on restaurant sales in the United States. *American Journal of Public Health*, 37:1687-1693, 1997; Colman, R., Urbanas, CM. "The economic impact of smoke-free workplaces: an assessment for Nova Scotia, prepared for Tobacco Control Unit, Nova Scotia Department of Health," *GPI Atlantic*, September 2001.)

(k) Smoking is a potential cause of fires; cigarette and cigar burns and ash stains on merchandise and fixtures causes economic damage to businesses. ("The high price of cigarette smoking," *Business and Health* 15(8), Supplement A: 6-9, August 1997.)

(l) The smoking of tobacco is a form of air pollution, a positive danger to health, and a material public nuisance. Accordingly, the city council finds and declares that the purposes of this ordinance are (1) to protect the public health and welfare by prohibiting smoking in public places and places of employment; and (2) to guarantee the right of nonsmokers to breathe smokefree air, and to recognize that the need to breathe smokefree air shall have priority over the desire to smoke.
