PrEP Pre exposure prophylaxis

1 PrEP can help prevent you from getting HIV infected.

2 PrEP works by taking a pill every day.

3 PrEP is even more effective in preventing HIV infection if it is used with a condom.

4 Anyone can take PrEP as long as they are working with a doctor.

5 Your doctor must write a prescription for the pill.

6 You will need to see the doctor every 3 months for follow up care and prescription refills.

7 The PrEP pill does not prevent other STDs.

8 Consider if PrEP would be right for you.
