HPV is a group of virus that causes various health issues relating to cancer affecting the anus, penis, throat and mouth.

**HPV is spread through skin-to-skin contact and is highly contagious.**

- More than 9,000 boys and men develop cancer from HPV infections each year.
- At least one in three males over the age of 15 are infected with at least one type of genital HPV.
- The most common HPV related cancer in men is oropharyngeal cancer.
