

Disease and Titer History

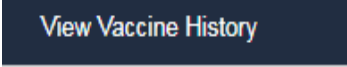

Objective: At the completion of this section, the user will know how to:

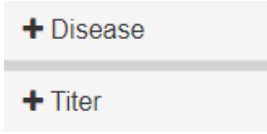

- view and update patients' disease histories and titer records in ImmPRINT

Remember that ImmPRINT is an immunization registry. While a complete medical and disease history is imperative to providing prudent patient care, ImmPRINT's data is specific to vaccine preventable diseases (VPDs) only. Therefore, users are only allowed to review and update patients' VPD disease and titer histories in ImmPRINT.

View Disease & Titer History

After searching and selecting the correct patient in ImmPRINT, select "View Vaccine

History" from the left side of the screen.  The "Vaccine History" page will appear. Scroll to the bottom of the page. The user will see two sections: Disease

and Titer.  The user can click on the  icon in each section. The sections will expand showing any documented disease or titer history.
