

Alabama IIS

The Alabama Department of Public Health's (ADPH) Immunization Division is the owner and manager for the **Imm**unization **P**atient **R**egistry with **I**ntegrated **T**echnology (ImmPRINT). ImmPRINT is Alabama's statewide electronic immunization IIS. The purpose of ImmPRINT is to be a reliable source for providing an accurate summary of vaccine histories for all Alabama patients.

The IIS is used to record all vaccines administered and evaluates trends by collecting and organizing immunization data throughout Alabama. Equipped with this data, ADPH Immunization staff can identify vaccination rates, practices, and disparities per county, health specialty, and/or patient populations. Public health personnel and officials can then better collaborate with health care providers, institutions, and the public to educate and improve vaccination rates and decrease the occurrence of vaccine preventable diseases. Ultimately, ImmPRINT is a tool used to serve and respond to the vaccination health needs of Alabamians.
