

Safeguard Your Power Supply

Protect plug and outlet

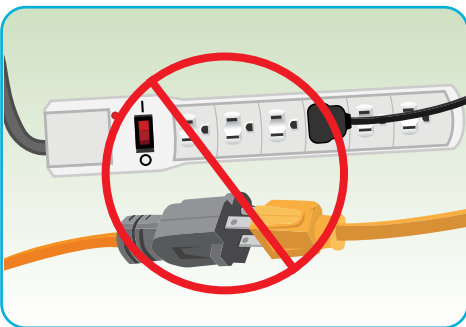

Plug in vaccine storage unit to a nearby outlet.

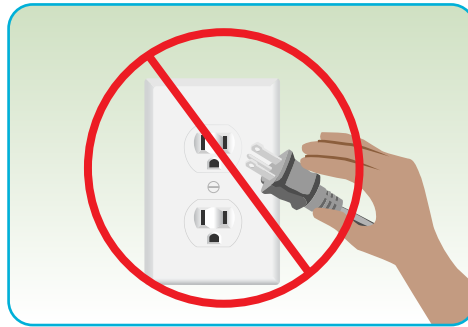

Secure plug with a guard/cover.

Post "Do Not Unplug" signs near outlet.

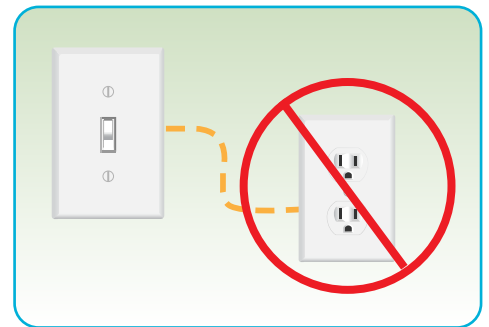

Always avoid disruption of power

Do not use extension cords or power strips with an ON/OFF switch.

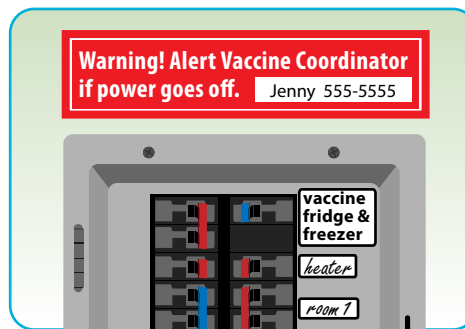

Never unplug the vaccine refrigerator or freezer.

Do not use outlets that are controlled by wall switches.

Do not use outlets that have built-in circuit switches (they have red reset buttons).

Label fuses and circuit breakers. Post a sign to alert the Vaccine Coordinator any time the power goes out.

If you experience a power failure, do not open refrigerator/freezer doors. If you determine that power will not be restored in time to maintain internal temperatures within recommended ranges, e.g. more than 2 hours, activate your emergency plan.
