

# Urinary Incontinence: Pathophysiology, Assessment and Treatment

## Satellite Conference and Live Webcast

Wednesday, October 21, 2015, 2:00-4:00 p.m. (Central Time)

3:00-5:00 p.m. (Eastern) • 1:00-3:00 p.m. (Mountain) • 12:00-2:00 p.m. (Pacific)

Urinary Incontinence (UI) is the loss of bladder control that can be caused by any number of reasons, but most typically is due to muscles in the pelvis that are either too weak or too active. It is a significant problem that affects millions of Americans and becomes more common with age. Women are two times more likely to experience UI than men. The clinician's evaluation of a patient with UI is important to identify the cause in order to help determine appropriate treatment options. Program faculty will define UI, describe the pathophysiology and clinical presentation of common types of UI, and discuss various causes of UI including the influence of pharmacology on UI. Treatment modalities along with pharmaceutical interventions will also be discussed.

### PROGRAM OBJECTIVES:

1. Define Urinary Incontinence (UI).
2. Describe the pathophysiology and clinical presentation of common types of UI.
3. Discuss basic management options for symptoms and causes of UI.
4. Discuss common medications that affect UI.
5. Discuss Pharmaceutical management of various types of UI.
