

Reportable Laboratory Test Results in Alabama

Who: Laboratories **When:** Effective 4/14/2024

What information is to be reported?

- Name, date of birth, sex, ethnicity, race, address, and phone number(s) of the person with resulted test
- Date of laboratory result
- Name, phone number, and the facility affiliated with laboratory testing
- Test method, specimen source, specimen collection date, and reference ranges

How to report laboratory test result information?

- Report all electronically. Some laboratory tests also require a phone call to (334) 290-6130 (24-hour coverage)
- Faxes are not electronic. For questions about reporting electronically, contact MU.ELR@adph.state.al.us.
- Refer to the Bureau of Clinical Laboratories online analyte list for specimen submission guidance: alabamapublichealth.gov/bcl/assets/bclanalytelist.pdf.

☐ Detection or isolation of one or more specimens of etiological agents of a disease or condition not listed that is of urgent public health significance	☐ <i>Corynebacterium diphtheriae</i>
☐ Agents suspected to be the cause of a cluster or outbreak	☐ <i>Coxiella burnetii</i> 
☐ <i>Anaplasma</i> species	 ☐ Crimean-Congo hemorrhagic fever virus
☐ <i>Babesia</i> spp.	☐ <i>Cryptosporidium</i> spp. 
 ☐ <i>Bacillus anthracis</i> 	☐ <i>Cyclospora cayetanensis</i>
☐ <i>Bordetella pertussis</i>	☐ Cytomegalovirus (if age <21 days old)
☐ <i>Borrelia burgdorferi</i>	☐ Dengue virus (all results)
 ☐ <i>Brucella</i> spp. 	☐ <i>E. coli</i> , shiga-toxin producing 
 ☐ <i>Burkholderia mallei</i> 	☐ Eastern equine encephalitis virus disease (all results)
 ☐ <i>Burkholderia pseudomallei</i> 	 ☐ Ebola virus 
☐ California serogroup virus diseases (all results) 	☐ <i>Ehrlichia</i> spp.
☐ <i>Campylobacter</i> spp. 	 ☐ <i>Francisella tularensis</i> 
<i>Candida auris</i> 	☐ <i>Grimontia hollisae</i>
Carbapenem-resistant <i>Acinetobacter baumannii</i> (CRAB) 	☐ <i>Haemophilus ducreyi</i>
Carbapenem-resistant <i>Enterobacteriaceae</i> (CRE) 	☐ <i>Haemophilus influenzae</i> from a normally sterile site 
Carbapenem-resistant <i>Pseudomonas aeruginosa</i> (CRPA) 	☐ Hepatitis A (IgM positives and genotyping results)
☐ Chikungunya virus disease (all results)	Hepatitis B, C, and D (all results to include ☐ surface antigens, antibody, genotyping, viral load/RNA/DNA, and associated ALTs)
☐ <i>Chlamydia trachomatis</i>	HIV, all test results (e.g., positive and negative immunoassay, positive and negative virologic tests, and associated CD4 counts) for children <18 months old
 ☐ <i>Clostridium botulinum</i> or botulinum toxin in food, wound, unspecified source, or an infant 	HIV, repeatedly reactive enzyme immunoassay followed by a positive confirmatory test (e.g., Western blot, IFA, or HIV differentiation). Positive result on any HIV virologic test (e.g., p24 AG, nucleic acid test (NAT/NAAT), viral culture). All viral load (detectable and undetectable) test results and associated CD4 counts.
☐ <i>Clostridium tetani</i>	
☐ <i>Coccidioides</i> spp.	
Coronaviruses, novel

Submit Clinical Materials

Influenza, novel	☐ <i>Rickettsia rickettsii</i> and other spotted fever <i>Rickettsia spp.</i>
☐ Influenza virus (molecular positive test results only)	☐ Rubella virus
☐ Lassa virus	☐ <i>Salmonella</i> serotype Typhi
☐ Lead, all blood results	☐ <i>Salmonella spp.</i> , non-Typhoidal
☐ <i>Legionella spp.</i> from a lower respiratory sample	☐ SARS-CoV-2
☐ <i>Listeria monocytogenes</i> from a normally sterile site	☐ <i>Shigella spp.</i>
☐ Lujo virus	☐ St. Louis encephalitis virus disease (all results)
☐ Mantoux tuberculin skin test (TST) and interferon gamma release assay (IGRA) blood test, positives	☐ <i>Staphylococcus aureus</i> , intermediate or full resistance to vancomycin (VISA, VRSA)
☐ Marburg virus	☐ <i>Streptococcus pneumoniae</i> from a normally sterile site*
☐ Measles (rubeola) virus	☐ <i>Treponema pallidum</i>
☐ Mumps virus	☐ <i>Trichinella spp.</i>
☐ <i>Mycobacterium leprae</i>	☐ Vaccinia virus
☐ <i>Mycobacterium tuberculosis</i> complex, culture, or NAAT (including PCR)	☐ Varicella virus
☐ <i>Naegleria fowleri</i>	☐ Variola virus (orthopox virus)
☐ <i>Neisseria gonorrhoeae</i>	☐ Venereal Disease Research Laboratory (VDRL) test, positive results
☐ <i>Neisseria meningitidis</i> from a normally sterile site	☐ <i>Vibrio cholerae</i> type O1 and O139
☐ New World arenavirus – Chapare virus	☐ <i>Vibrio spp.</i>
☐ New World arenavirus – Guanarito virus	☐ West Nile virus disease (all results)
☐ New World arenavirus – Junin virus	☐ Western equine encephalitis virus disease (all results)
☐ New World arenavirus – Machupo virus	☐ Yellow fever virus (all results)
☐ New World arenavirus – Sabia virus	☐ <i>Yersinia pestis</i>
☐ <i>Photobacterium damsela</i>	☐ Zika virus (all results)
☐ <i>Plasmodium spp.</i>	
☐ Poliovirus	
☐ Powassan virus disease (all results)	
☐ Rabies virus in animal or human	
☐ Rapid plasma reagin (RPR), positive results	

Note: *Submit all CSF isolates. Submit other isolates from normally sterile sites (e.g., blood, middle ear fluid, joint fluid, or perinatal fluid) must be non-susceptible to any relevant antibiotics according to current Clinical Laboratory Standards Institute M100 guidance.
