## INTRODUCTION

This *County Health Profiles* publication is a revision of Volume IV of *Alabama Vital Events, "County Profiles."* It is retitled to reflect the emphasis on health-related data and has been reformatted to contain the most frequently requested health data by county. The *Alabama Vital Events* publication has also been renamed to *Alabama Vital Statistics*, which contains data from Volumes I - III in one publication.

*County Health Profiles* and many other reports prepared by the Center for Health Statistics are now available on the Internet at [www.adph.org](http://www.adph.org), then click on Fast Find, then Health Statistics. This site has many tables and reports for immediate use.

Data for each county are displayed on two matching pages, left and right. Various footnotes give explanatory details about the different kinds of rates presented in the tables. Additional information may be obtained from the Technical Notes and Definitions in the Appendix B.

## 2001 HEALTH PROFILE OF ALABAMA

2001 POPULATION	
Total	4,486,580
White	3,178,348

<b>Other</b>	4,211	2,244	50.0	1,288	59.4	956	41.2

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

<sup>1</sup>Per 1,000 population.

<sup>2</sup>Total rate per 1,000 females 15-44.

<sup>3</sup>Age-specific rate per 1,000 females in age group.

<sup>4</sup>Percent of total births.

<sup>5</sup>Percent of all teen births.

<sup>6</sup>Per 100,000 population.

<sup>7</sup>2000 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

<sup>1</sup>Per 1,000 population.

<sup>2</sup>Total rate per 1,000 females 15-44.

<sup>3</sup>Age-specific rate per 1,000 females in age group.

<sup>4</sup>Percent of total births.

<sup>5</sup>Percent of all teen births.

<sup>6</sup>Per 100,000 population.

<sup>7</sup>2000 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

<sup>1</sup>Per 1,000 population.

<sup>2</sup>Total rate per 1,000 females 15-44.

<sup>3</sup>Age-specific rate per 1,000 females in age group.

<sup>4</sup>Percent of total births.

<sup>5</sup>Percent of all teen births.

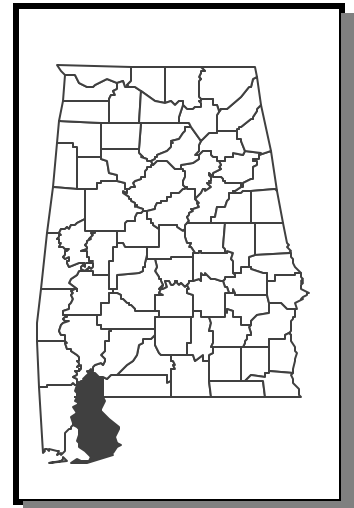

<sup>6</sup>Per 100,000 population.

<sup>7</sup>2000 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

<sup>1</sup>Per 1,000 population.

<sup>2</sup>Total rate per 1,000 females 15-44.

<sup>3</sup>Age-specific rate per 1,000 females in age group.

<sup>4</sup>Percent of total births.

<sup>5</sup>Percent of all teen births.

<sup>6</sup>Per 100,000 population.

<sup>7</sup>2000 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

<sup>1</sup>Per 1,000 population.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

<sup>1</sup>Per 1,000 population.

<sup>2</sup>Total rate per 1,000 females 15-44.

<sup>3</sup>Age-specific rate per 1,000 females in age group.

<sup>4</sup>Percent of total births.

<sup>5</sup>Percent of all teen births.

<sup>6</sup>Per 100,000 population.

<sup>7</sup>2000 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

<sup>1</sup>Per 1,000 population.

<sup>2</sup>Total rate per 1,000 females 15-44.

<sup>3</sup>Age-specific rate per 1,000 females in age group.

<sup>4</sup>Percent of total births.

<sup>5</sup>Percent of all teen births.

<sup>6</sup>Per 100,000 population.

<sup>7</sup>2000 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

<sup>1</sup>Per 1,000 population.

<sup>2</sup>Total rate per 1,000 females 15-44.

<sup>3</sup>Age-specific rate per 1,000 females in age group.

<sup>4</sup>Percent of total births.

<sup>5</sup>Percent of all teen births.

<sup>6</sup>Per 100,000 population.

<sup>7</sup>2000 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

<sup>1</sup>Per 1,000 population.

<sup>2</sup>Total rate per 1,000 females 15-44.

<sup>3</sup>Age-specific rate per 1,000 females in age group.

<sup>4</sup>Percent of total births.

<sup>5</sup>Percent of all teen births.

<sup>6</sup>Per 100,000 population.

<sup>7</sup>2000 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

<sup>1</sup>Per 1,000 population.

<sup>2</sup>Total rate per 1,000 females 15-44.

<sup>3</sup>Age-specific rate per 1,000 females in age group.

<sup>4</sup>Percent of total births.

<sup>5</sup>Percent of all teen births.

<sup>6</sup>Per 100,000 population.

<sup>7</sup>2000 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

<sup>1</sup>Per 1,000 population.

<sup>2</sup>Total rate per 1,000 females 15-44.

<sup>3</sup>Age-specific rate per 1,000 females in age group.

<sup>4</sup>Percent of total births.

<sup>5</sup>Percent of all teen births.

<sup>6</sup>Per 100,000 population.

<sup>7</sup>2000 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

<sup>1</sup>Per 1,000 population.

<sup>2</sup>Total rate per 1,000 females 15-44.

<sup>3</sup>Age-specific rate per 1,000 females in age group.

<sup>4</sup>Percent of total births.

<sup>5</sup>Percent of all teen births.

<sup>6</sup>Per 100,000 population.

<sup>7</sup>2000 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

<sup>1</sup>Per 1,000 population.

<sup>2</sup>Total rate per 1,000 females 15-44.

<sup>3</sup>Age-specific rate per 1,000 females in age group.

<sup>4</sup>Percent of total births.

<sup>5</sup>Percent of all teen births.

<sup>6</sup>Per 100,000 population.

<sup>7</sup>2000 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is the not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

<sup>1</sup>Per 1,000 population.

<sup>2</sup>Total rate per 1,000 females 15-44.

<sup>3</sup>Age-specific rate per 1,000 females in age group.

<sup>4</sup>Percent of total births.

<sup>5</sup>Percent of all teen births.

<sup>6</sup>Per 100,000 population.

<sup>7</sup>2000 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

<sup>1</sup>Per 1,000 population.

<sup>2</sup>Total rate per 1,000 females 15-44.

<sup>3</sup>Age-specific rate per 1,000 females in age group.

<sup>4</sup>Percent of total births.

<sup>5</sup>Percent of all teen births.

<sup>6</sup>Per 100,000 population.

<sup>7</sup>2000 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

<sup>1</sup>Per 1,000 population.

<sup>2</sup>Total rate per 1,000 females 15-44.

<sup>3</sup>Age-specific rate per 1,000 females in age group.

<sup>4</sup>Percent of total births.

<sup>5</sup>Percent of all teen births.

<sup>6</sup>Per 100,000 population.

<sup>7</sup>2000 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

<sup>1</sup>Per 1,000 population.

<sup>2</sup>Total rate per 1,000 females 15-44.

<sup>3</sup>Age-specific rate per 1,000 females in age group.

<sup>4</sup>Percent of total births.

<sup>5</sup>Percent of all teen births.

<sup>6</sup>Per 100,000 population.

<sup>7</sup>2000 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

<sup>1</sup>Per 1,000 population.

<sup>2</sup>Total rate per 1,000 females 15-44.

<sup>3</sup>Age-specific rate per 1,000 females in age group.

<sup>4</sup>Percent of total births.

<sup>5</sup>Percent of all teen births.

<sup>6</sup>Per 100,000 population.

<sup>7</sup>2000 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

<sup>1</sup>Per 1,000 population.

<sup>2</sup>Total rate per 1,000 females 15-44.

<sup>3</sup>Age-specific rate per 1,000 females in age group.

<sup>4</sup>Percent of total births.

<sup>5</sup>Percent of all teen births.

<sup>6</sup>Per 100,000 population.

<sup>7</sup>2000 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

<sup>1</sup>Per 1,000 population.

<sup>2</sup>Total rate per 1,000 females 15-44.

<sup>3</sup>Age-specific rate per 1,000 females in age group.

<sup>4</sup>Percent of total births.

<sup>5</sup>Percent of all teen births.

<sup>6</sup>Per 100,000 population.

<sup>7</sup>2000 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

<sup>1</sup>Per 1,000 population.

<sup>2</sup>Total rate per 1,000 females 15-44.

<sup>3</sup>Age-specific rate per 1,000 females in age group.

<sup>4</sup>Percent of total births.

<sup>5</sup>Percent of all teen births.

<sup>6</sup>Per 100,000 population.

<sup>7</sup>2000 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

<sup>1</sup>Per 1,000 population.

<sup>2</sup>Total rate per 1,000 females 15-44.

<sup>3</sup>Age-specific rate per 1,000 females in age group.

<sup>4</sup>Percent of total births.

<sup>5</sup>Percent of all teen births.

<sup>6</sup>Per 100,000 population.

<sup>7</sup>2000 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

<sup>1</sup>Per 1,000 population.

<sup>2</sup>Total rate per 1,000 females 15-44.

<sup>3</sup>Age-specific rate per 1,000 females in age group.

<sup>4</sup>Percent of total births.

<sup>5</sup>Percent of all teen births.

<sup>6</sup>Per 100,000 population.

<sup>7</sup>2000 data.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are noted by an asterisk. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the age intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population projections are provided by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama.

TERMINATION OF PREGNANCY

## TECHNICAL NOTES

### Sources and Completeness of Data

Data in this publication are from certificates and reports filed with the Center for Health Statistics (CHS) in the Alabama Department of Public Health according to Alabama Vital Statistics Laws. The State Registrar of Vital Records enforces the laws and administers the system of vital statistics. Birth, death, marriage and divorce certificates and fetal death and induced termination of pregnancy reports provide most of the information included in this publication. The statewide data for Alabama are also sent to the National Center for Health Statistics (NCHS) for inclusion in national reports and tabulations.

*BIRTHS.* If a birth occurs in a hospital, the birth certificate is filed by that institution with the CHS. Information on a birth certificate is obtained from a parent and from medical files for the mother and infant. Nearly 99 percent of the hospitals in Alabama use a birth certificate software package provided by the CHS to prepare birth certificates and electronically transmit data to CHS. If a birth occurs outside of a facility, the birth certificate is filed by the parent or someone else aware of the facts of birth. Formal testing of completeness of birth has not been done since 1950 when birth registration completeness for births occurring in hospitals was 99.6 percent. Since that time, additional checks have been added to ensure that all births are filed. Also, since the legal requirements for certified copies of births have increased, nearly 100 percent of all births are filed with CHS.

*DEATHS.* Mortality data are obtained from death certificates filed with CHS. In Alabama, the funeral director who first takes custody of the body is responsible for obtaining the demographic data from the next of kin and filing the death certificate. The medical certification is completed by the physician in charge of the care of the decedent for the illness or condition that resulted in death or by the county medical examiner or coroner. Registration of deaths is thought to be nearly 100 percent complete since the death certificate is needed by the next of kin for legal purposes. In addition, listings of deaths, which are independently prepared by funeral directors, coroners, hospitals, nursing homes and other institutions where deaths occur, are compared to certificates received to ensure that all deaths are filed.

*MARRIAGES.* The judge of probate in each county in Alabama issues a marriage license containing information obtained from the parties who intend to be married. After the marriage ceremony has taken place, the person who performs the marriage certifies the fact of marriage and returns the record to the judge of probate who forwards it to the CHS. Marriage data are believed to be nearly 100 percent complete since a license is needed prior to the ceremony being performed.

*DIVORCES.* Divorce certificates are prepared by the petitioner or his or her legal representative and presented to the clerk of a court where divorces are granted. The clerk of the court completes the information certifying the divorce and forwards the certificate to the CHS. While the law does require the divorce certificate to be filed before a divorce is granted, the filing of these records may not be as complete as other vital records since court procedures vary.

*FETAL DEATHS.* Reports of fetal death are required to be sent to the CHS if the fetus has advanced to or beyond the twentieth week of uterogestation. If the fetal death occurs in an institution, the person in charge of the institution or his or her representative is responsible for filing the report. If the fetal death occurs outside of an institution, the physician in attendance is responsible for filing the report. Since not all fetal deaths are medically attended, it is likely that there is some under reporting of these events. Evidence indicates that reporting may be better in metropolitan counties.

*INDUCED TERMINATIONS OF PREGNANCY.* Since 1993, reports of induced termination of pregnancy have been required for all events occurring in Alabama. If the induced termination of pregnancy occurs in an institution, the person in charge of the institution is required to file the report. If the induced termination of pregnancy occurs outside of an institution, the physician in attendance is required to file the report. From September 1987 to December 1992, the only reporting requirement for induced terminations of pregnancy was for events to women under 18 years of age as part of the Parental Consent Act. The degree of completeness for these reports is not known. However, if the CHS learns of institutions that are not aware of the reporting requirements, they are contacted and reporting is immediately initiated.

*OUT OF STATE EVENTS.* To have complete data for state residents, offices of vital statistics in all states have entered into an agreement to share data for statistical purposes. When a report or certificate is filed for a vital event that occurred in Alabama to a resident of another state or Canada, Alabama notifies that government. Likewise, Alabama receives information and reports about events happening to Alabama residents in other states or in Canada. Data from these out of state events are included in the tabulations of resident data presented in this publication.

Most states send reports of out of state events to CHS on an ongoing basis, and these reports are believed to be quite complete since laws and procedures in other states are quite similar to Alabama's. The exception is reports of induced termination of pregnancy which have different reporting requirements in other states. Florida, a neighboring state, does not have a procedure for reporting Alabama resident induced terminations of pregnancy to CHS. Since it is unknown how many Alabama residents may have these events in neighboring states, the number of reported induced terminations of pregnancy for Alabama residents may be somewhat low.

### **Quality of Data**

After reports and certificates are received at CHS, they are reviewed for all necessary information and signatures. Records that are incomplete or improperly completed are returned to the provider to be redone. If the information is accurate and consistent, the record is accepted into the official vital record files for Alabama.

Data for 99 percent of the births are keyed at the hospital into software containing edits and consistency checks and are electronically transmitted to CHS. Data for deaths, fetal deaths, induced terminations of pregnancy, marriages and divorces are coded and keyed into a computer database by CHS staff. Numerous edits and consistency checks are performed on all computer files to insure that the data are as accurate as possible. If data are inconsistent or missing, the provider is queried to try to verify information provided or to obtain the correct data. Additional procedures cross-check that all births and deaths are accounted for, particularly for infant deaths.

### **Residence Data**

Unless specifically noted otherwise, data from vital events in this publication are reported according to the county or place of residence where the person, patient or decedent actually lived. Birth, fetal death, and induced termination of pregnancy statistics are reported according to the mother's residence. Deaths are reported by the residence of the decedent. The exceptions are marriage and divorce data that are reported according to the county where the marriage certificate was issued or the divorce was finalized.

Vital events occurring in other states and Canada to Alabama residents are also included in the residence data in this publication. See discussion under SOURCES AND COMPLETENESS OF DATA -- OUT OF STATE EVENTS.

### **Population Denominators**

Population figures used in this publication to calculate rates for 2001 are from projections provided by the Alabama Data Center, Center for Business and Economic Research, University of Alabama (CBER). The 2001 population figures were based on 2000 U.S. Census counts and projected forward. For 2000, actual Census counts were used for the denominators for the rates. For the years 1990 through 1999, population figures used were prepared by CBER projecting forward from the 1990 Census. Caution should be used in comparing rates over time, since the further away from the Census, the less accurate the populations and associated rates become. Based on 2000 Census data, the population projections for the late 1990s appear to be too low, and thus the rates for those years may be too high.

The rates in this publication may not be the same as those given in other publications if population data are from a different source. For example, for the years between decennial national censuses, the National Center for Health Statistics (NCHS) calculates crude rates using population *estimates* provided by US Census Bureau. Those figures are calculated in retrospect based on various housing, labor and vital statistics and are not the same as the figures used in CHS publications. Therefore, rates shown for Alabama vital events in NCHS publications may be slightly different from rates in this publication.

### **Race**

Birth, fetal death, and induced termination of pregnancy statistics are reported according to the race of the mother since many of the health conditions related to these events are directly associated with the mother. Deaths are reported by the race of the decedent. Infant deaths are tabulated by the race of the infant (the decedent) while births, the denominator used for calculating infant mortality rates, are based on the race of the mother. Data for marriages and divorces are shown for both parties to the event.

For processing purposes, ten racial groupings are used: white, black, American Indian, Chinese, Japanese, Hawaiian, Filipino, "other Asian or Pacific Islander," "other entries," and "unknown race." However, for tables shown in this publication, these groups are consolidated into "White" and "Black and Other." "White" encompasses Mexican, Puerto

Rican, Cajun, Creole, and "other Caucasian." The "Black and Other" group includes black, American Indian, Chinese, Japanese, Hawaiian, Filipino, and "other Asian or Pacific Islander." Events of unknown race are included in the "White" category.

Population estimates from the Bureau of the Census for 1999 show the population for Alabama as approximately 73 percent "white", 26 percent "black" and one percent "other races."

## Cause of Death

Alabama law requires the physician in charge of the care of the patient for the illness or condition that resulted in death to complete the medical certification section on the death certificate. The physician is requested to state the diseases or conditions that caused the death and other significant conditions contributing to death. If a death occurs with no physician in charge of the care, the county coroner or in a few counties, the medical examiner, is responsible for determining the cause of death.

**CLASSIFICATION.** For tabulation purposes, causes of death are coded according to the *International Classification of Diseases*<sup>1</sup> (ICD) which provides the essential ground rules for the coding and classification of cause-of-death data. The ICD was developed collaboratively between the World Health Organization (WHO) and ten international centers, one of which is housed at NCHS. The purpose of the ICD is to promote international comparability in the collection, classification, processing and presentation of health statistics. The United States is required to use the ICD under an agreement with WHO that has the force of an international treaty.

Besides being a classification system for the cause of death, the ICD includes coding rules. These rules identify the single condition on the death certificate considered most informative from a public health point of view, called the *underlying cause of death*. The underlying cause is the disease or injury initiating the sequence of events that leads directly to death or the circumstances of the accident or violence that produced the fatal injury.

Cause of death data in this publication were coded according to procedures established by the National Center for Health Statistics<sup>2</sup>. Starting with death records for 1999, cause of death data were processed through computer software programs from NCHS which allow CHS staff to enter the literal information provided by the physician or coroner in the medical certification section of the death certificate. The software programs are written to apply WHO rules to select the underlying cause of death from all the conditions given on the death certificate. Tables in this publication contain the underlying cause of death as determined through these procedures.

**TABULATION LISTS AND CAUSE OF DEATH RANKINGS.** For dissemination and presentation of data, NCHS developed several tabulation lists which group causes of death codes into categories that are of public health interest and medical importance. The lists have increasing levels of detail or are for specific categories of death and are published in Part 9 of the NCHS Instruction Manual Series.<sup>3</sup> Certain groups of causes on these lists are used for ranking causes of death to determine the leading causes of death. Starting with 1999 data, the list most widely used to identify and rank the leading causes of death in the United States is the *ICD-10 List of 113 Selected Causes of Death*. This list replaces the *ICD-9 List of 72 Selected Causes of Death* used from 1979 through 1998. For areas smaller than a state or nation, a *condensed list of selected causes* was developed to present cause of death data in Alabama.

**CHANGE IN ICD.** The ICD has been revised approximately once every 10 years to stay abreast with advances in medical science and to ensure the international comparability of health statistics. The tenth and most recent revision, known as the ICD-10, was first used to classify deaths that occurred on January 1, 1999 and after. The previous version, the ICD-9, was used from 1979 through 1998.

The ICD-10 is much more detailed with about 8,000 possible categories for cause of death compared with 4,000

---

<sup>1</sup>World Health Organization. "International Statistical Classification of Diseases and Related Health Problems, Tenth Revision." Geneva: World Health Organization, 1992.

<sup>2</sup>National Center for Health Statistics. "NCHS Instruction Manual, Part 2a, Vital Statistics, Instructions for Classifying the Underlying Cause of Death." Hyattsville, Maryland: Public Health Service, published annually.

<sup>3</sup>National Center for Health Statistics, Centers for Disease Control and Prevention. "Instruction Manual Part 9, ICD-10 Cause-of-Death Lists for Tabulation Mortality Statistics, Effective 1999." Hyattsville, Maryland: October, 1997.

categories in the previous version. For the first time, the ICD-10 uses alphanumeric codes. In the tenth revision of the ICD, cause of death titles have been changed and conditions have been regrouped. Some coding rules have also been changed. In addition, ICD-10 tabulation lists used in publications have also changed, so mortality data prepared under different revisions of the ICD may not be comparable.

**COMPARISON OF CAUSE OF DEATH DATA.** Changes in moving to a new revision of the ICD can cause major discontinuities in trend data for certain causes of death. To understand the changes in mortality rates that are simply due to the new ICD revision, NCHS double codes a large sample of deaths under each revision to develop *comparability ratios*. This is simply the ratio of deaths coded under the new revision (ICD-10) divided by the number under the old revision (ICD-9) for a particular cause of death. These ratios are given in Robert Anderson, et. al., *Comparability of Cause of Death between ICD-9 and ICD-10: Preliminary Estimates*, Hyattsville, MD, National Vital Statistics Reports, Volume 49, Number 2, May 18, 2001. Comparability ratios can be applied to specific cause of death groups that were coded under ICD-9 to see how many deaths in that specific group would result if those same deaths had been coded under the new ICD-10. Application of the comparability ratios is crucial in time trend analyses. For additional information on comparability ratios, see the NCHS web site at [www.cdc.gov/nchs](http://www.cdc.gov/nchs).

### **Handling of Unknowns**

Items with a missing value or a response of "unknown" are shown as Not Stated in tables of frequency distributions and are included in totals and subtotals. However, for calculation of rates and ratios, "unknowns" are subtracted from denominators before calculations are made.

The only exceptions to this rule are for race and sex. Events with race "unknown" are included with "white" for tabulation purposes. If sex cannot be determined, sex is considered male if the day of the event is odd and female if the day is even.

### **Data Techniques**

Data in this publication are generally presented as frequencies, rates, ratios and percentages. Frequency distributions tell how many times an event occurred for a particular population. For purposes of comparison rates, ratios and percentages are provided to standardize the figures. A ratio is a comparison of two quantities and is generally expressed as a fraction. A rate is the number of items having a certain characteristic divided by the total number of items. Rates are generally expressed to a standard base of 100, 1,000 or 100,000. Percentages are rates standardized to a base of 100.

Demographic rates make all populations equal in size. Demographic rates such as the death rate and birth rate are calculated by dividing the number of events in a given period by the population at risk during that period. Thus, rates give the number of events per person, or the average. By standardizing all populations to the same size, we eliminate one factor that makes comparisons among areas difficult.

The base of a demographic rate may be the total population or a sub population. Rates based on the total population are called crude rates. Others are called specific rates, such as age-specific rates used for children or teenaged populations or the sex-specific rate for prostate cancer. For information on specific calculations, see the section on FORMULAS.

### **Small Number Limitations**

When using vital events data for studying small geographic areas or for examining specific medical or social factors, the number of events reported in a given year may be very small. Understanding the statistical limitations of small numbers is important in conducting analyses. Any time something is measured, error is almost inevitable. Error can be based on the accuracy of the reports, or alternately, on the number of the events or the size of the population. Some error is random, and when the numbers are very large, random error does not affect the usefulness of the data. However, when the number of vital events is very small or the population of the area is very low, random errors in data collection, or even randomly occurring events, can cause drastic fluctuations in rates.

One way to counteract random error is to increase the number of years or enlarge the area being studied. Otherwise calculations may be correct, but of very limited practical value. In this publication, rates are given regardless of their stability; however, for rates based on very small numbers, warnings are issued in the footnotes.

## DEFINITIONS

Some definitions used in this publication may vary in meaning among states or nations. Also, some subjects change in definition over time. Center for Health Statistics definitions are consistent for all publications within a given year and are generally the same definitions used by the National Center for Health Statistics. However, a data-user should always compare definitions across geographical areas and times.

**ABORTION** ) See INDUCED TERMINATION OF PREGNANCY. In this publication, the terms *abortion* and *induced termination of pregnancy* are used synonymously.

**ADEQUACY OF PRENATAL CARE UTILIZATION INDEX (APNCU)** ) This index, also known as the Kotelchuck Index of Prenatal Care, was designed as an improvement on the Kessner Index. It has 5 values: 1 = adequate plus, 2 = adequate, 3 = intermediate, 4 = inadequate and 5 = unknown. Its major advantage is that it divides the adequate into two categories. Those with adequate plus had other risk factors, which increased the number of visits. The index can serve as an indicator that some medical condition required additional prenatal care. [Kotelchuck M., "An Evaluation of the Kessner Adequacy of Prenatal Care Index and a Proposed Adequacy of Prenatal Care Utilization Index", *American Journal of Public Health*, 1994, 84(9):1414-20.]

**ANNULMENT** ) "To nullify, to abolish, to make void by competent authority. An annulment differs from a divorce in that a divorce terminates a legal status, whereas an annulment establishes that a marital status never existed." *Black's Law Dictionary, Sixth Edition*. In this publication, annulments are included with divorces for rate calculation purposes and are available only by place of occurrence.

**BIRTH** ) See LIVE BIRTH. In this publication, the terms *live birth* and *birth* are used synonymously.

**BIRTH INTERVAL** ) The period from the date of the current birth to the date of the last termination of pregnancy, birth or otherwise.

**BIRTH ORDER** ) The numeric relationship of a child to other children born alive to that mother.

**CAUSE OF DEATH** ) The cause of death presented in this publication is the "underlying cause" which is defined as the cause deemed responsible for the sequence of morbid events leading directly to death or the circumstances of the accident or violence that produced the fatal injury. Deaths, by cause, are classified according to the *International Classification of Diseases (ICD), Tenth Revision*, following instructions established by the National Center for Health Statistics. See Appendix C for the compilation lists and ICD 10 codes used for the leading cause of death.

**DEATH** ) Death is defined in *Black's Law Dictionary, Sixth Edition* as "The cessation of life; permanent cessations of all vital functions and signs." For definitions of the determination of death under other than general circumstances, the *Code of Alabama* should be consulted.

**DIVORCE** ) A court decree dissolving a marital relationship. A divorce from bed and

board is a separation from cohabitation which does not otherwise affect the marriage and is not included in this publication. See *Code of Alabama* for additional information. For rate calculation purposes in this publication, divorces include annulments and are reported by the county where the divorce occurred.

**ESTIMATED POPULATION** ) Estimated population as of April 1 of the year for which the estimate is made.

**ESTIMATED PREGNANCIES** - The sum of births, induced terminations of pregnancy, and estimated total fetal losses.

**ESTIMATED TOTAL FETAL LOSSES** ) This term, which is a component used in determining the number of estimated pregnancies, is an estimate of the total number of fetal losses regardless of the gestational age of the fetus. Estimated total fetal losses is equal to the sum of 20 percent of births and 10 percent of induced terminations of pregnancy. This formula was developed by The Alan Guttmacher Institute and is widely accepted and used. Estimated total fetal losses should be distinguished from the term fetal deaths as used in this publication. While Alabama law defines fetal death to include all gestations (see definition of FETAL DEATH), only fetal deaths of at least 20 weeks in gestation are required to be reported by Alabama law and are the only ones counted as fetal deaths in this publication.

**FETAL DEATH** ) "Death prior to the complete expulsion or extraction from the mother of a product of human conception, irrespective of the duration of pregnancy and which is not an induced termination of pregnancy. The death is indicated by the fact that after the expulsion or extraction the fetus does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps." *Code of Alabama, 1975, Section 22-9A-1*. While the definition of fetal death includes all gestations, only fetal deaths that have advanced to or are beyond the twentieth week of uterogestation are required to be reported under Alabama law and they are the only ones counted as fetal deaths in this publication. (Also see ESTIMATED TOTAL FETAL LOSSES.)

**GESTATION** ) The period of development from the time of fertilization of the ovum to birth. In these publications, the terms *gestation* and *uterogestation* are used synonymously.

**INDUCED TERMINATION OF PREGNANCY** ) "The purposeful interruption of an intrauterine pregnancy with the intention other than to produce a liveborn infant and which does not result in a live birth. This definition excludes management of prolonged retention of products of conception following fetal death." *Code of Alabama, 1975, Section 22-9A-1* In these publications, the terms *induced termination of pregnancy* and *abortion* are used synonymously.

**INFANT DEATH** ) Death of a liveborn infant under one year of age. The term excludes fetal death.

**INTERNATIONAL CLASSIFICATION OF DISEASES (ICD)** ) A publication of the World Health Organization (WHO) that provides the essential ground rules for the coding

and classification of cause-of-death data. The purpose of the ICD and of WHO sponsorship is to promote international comparability in the collection, classification, processing and presentation of health statistics. In addition to being a classification system, the rules provide for identification of a single condition on the death certificate that is considered most informative from a public health point of view, called the underlying cause of death.

**LIVE BIRTH** ) "The complete expulsion or extraction from the mother of a product of human conception, irrespective of the duration of the pregnancy, which, after such expulsion or extraction, breathes or shows any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached. Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps." *Code of Alabama, 1975, Section 22-9A-1*. In these publications, the terms *live birth* and *birth* are used synonymously.

**LOW BIRTH WEIGHT** ) A weight at birth of under 2,500 grams or under 5 pounds and 8 ounces.

**MARRIAGE** ) The legal union of a man and a woman which establishes their relationship as husband and wife. See *Code of Alabama* for additional information. Marriage data are reported by the county where the marriage occurred.

**MATERNAL DEATH** ) A death due to complications of pregnancy, labor, delivery, or puerperium (ICD 10 codes: O00-O99).

**NEONATAL DEATH** ) Death of a liveborn infant occurring within the first 27 days of life.

**OCCURRENCE DATA** ) Data compiled as to the geographical place where the event occurred.

**PERINATAL DEATH** ) Death of a fetus of 28 or more weeks gestation or death of a live born infant under seven days of age. Note that several other definitions of this term exist.

**POSTNEONATAL DEATH** ) Death of a liveborn infant after the first 27 days of age, but before one year of age.

**RESIDENT DATA** ) Data compiled as to the place of residence without regard to the geographical place where the event occurred. For births and fetal deaths, place of residence of mother is used.

**TEENAGE** ) In this publication, persons aged 10 years through 19 years.

**TOTAL BIRTH ORDER** ) An expression of the numeric relationship of the birth of a child to all deliveries to that mother regardless of the outcome of a pregnancy.

**VERY LOW BIRTH WEIGHT** ) A weight at birth of under 1500 grams or under 3 pounds and 5 ounces.

## ALABAMA VITAL STATISTICS FORMULAS

$$\text{AGE \& SPECIFIC BIRTH RATE} = \frac{\text{Number of Live Births To Females In Specific Age Group}}{\text{Estimated Female Population in That Age Group}} \times 1,000$$

$$\text{TEENAGE BIRTH RATE} = \frac{\text{Number of Live Births to Females Aged 10\&19}}{\text{Estimated Female Population Aged 10\&19}} \times 1,000$$

$$\text{BIRTH RATE or CRUDE BIRTH RATE} = \frac{\text{Number of Live Births}}{\text{Estimated Midyear Population}} \times 1,000$$

$$\text{TEENAGE PREGNANCY RATE} = \frac{\begin{matrix} \text{Number of Live Births to Females Aged 10\&19} \\ \text{Number of Abortions to Females Aged 10\&19} \\ \text{Estimated Total Fetal Losses to Females Aged 10\&19} \end{matrix}}{\text{Estimated Female Population 10\&19 Years of Age}} \times 1,000$$

$$\text{PREGNANCY RATE} = \frac{\begin{matrix} \text{Number of Live Births} \% \\ \text{Number of Abortions} \% \\ \text{Estimated Total Fetal Losses} \end{matrix}}{\text{Estimated Female Population 15\&44 Years of Age}} \times 1,000$$

$$\text{ESTIMATED PREGNANCIES} = \frac{\begin{matrix} \text{Number of Live Births} \% \\ \text{Number of Abortions} \% \\ \text{Estimated Total Fetal Losses} \end{matrix}}$$

$$\text{TOTAL FERTILITY RATE} = \left\{ \begin{matrix} \text{Age\&Specific Birth Rate For Females Aged 10\&14} \\ \text{Age\&Specific Birth Rate For Females Aged 15\&19} \\ \text{Age\&Specific Birth Rate For Females Aged 20\&24} \\ \text{Age\&Specific Birth Rate For Females Aged 25\&29} \\ \text{Age\&Specific Birth Rate For Females Aged 30\&34} \\ \text{Age\&Specific Birth Rate For Females Aged 35\&39} \\ \text{Age\&Specific Birth Rate For Females Aged 40\&44} \\ \text{Age\&Specific Birth Rate For Females Aged 45\&49} \end{matrix} \right\} \times \left\{ \begin{matrix} \text{Age Interval In Age Group} \\ \text{Age Interval In Age Group} \\ \text{Age Interval In Age Group} \\ \text{Age Interval In Age Group} \\ \text{Age Interval In Age Group} \\ \text{Age Interval In Age Group} \\ \text{Age Interval In Age Group} \\ \text{Age Interval In Age Group} \end{matrix} \right\} \%$$

(Some states do not consider age groups 10-14 and 45-49 in this computation. Caution should be exercised in comparing TOTAL FERTILITY RATES between states.)

$$\text{INFANT MORTALITY RATE} = \frac{\text{Number of Deaths Under 1 Year of Age}}{\text{Number of Live Births}} \times 1,000$$

$$\text{POSTNEONATAL MORTALITY RATE} = \frac{\text{Number of Deaths 28 or More Days, But Less Than 1 Year of Age}}{\text{Number of Live Births}} \times 1,000$$

$$\text{NEONATAL MORTALITY RATE} = \frac{\text{Number of Deaths Under 28 Days of Age}}{\text{Number of Live Births}} \times 1,000$$

$$\text{TEENAGE ABORTION RATE} = \frac{\text{Number of Abortions to Females Aged 10\&19}}{\text{Estimated Female Population Aged 10\&19}} \times 1,000$$

$$\text{ESTIMATED TOTAL FETAL LOSSES} = 20 \text{ Percent of Live Births} + 10 \text{ Percent of Abortions}$$

$$\text{ABORTION RATE} = \frac{\text{Number of Abortions}}{\text{Estimated Female Population 15\&44 Years of Age}} \times 1,000$$

$$\text{DEATH RATE} = \frac{\text{Number of Deaths}}{\text{Estimated Midyear Population}} \times 1,000$$

$$\text{CAUSE\&SPECIFIC DEATH RATE} = \frac{\text{Number of Deaths for Specific Cause}}{\text{Estimated Midyear Population}} \times 100,000$$

$$\text{AGE\&SPECIFIC DEATH RATE} = \frac{\text{Number of Deaths for Specific Age Group}}{\text{Estimated Population In That Age Group}} \times 1,000$$

$$\text{MARRIAGE RATE} = \frac{\text{Number of Marriages}}{\text{Estimated Midyear Population}} \times 1,000$$

$$\text{DIVORCE (DISSOLUTION) RATE} = \frac{\text{Number of Divorces and Annulments}}{\text{Estimated Midyear Population}} \times 1,000$$

## ICD-10 CODES USED IN THE 2001 COUNTY HEALTH PROFILES

### SELECTED DEATHS

Heart Disease = I00-I09 or I11 or I13 or I20-I51

Cancer = C00-C99

Stroke = I60-I69

Accidents = V01-X59 or Y85-Y86

Chronic Lower Respiratory = J40-J47

Diabetes = E10-E14

Influenza & Pneumonia = J10-J18

Alzheimer's Disease = G30

Suicide = X60-X84 or Y870

Homicide = X85-Y09 or Y871

HIV = B20-B24

### ACCIDENTAL DEATHS

All Accidents = V01-X59 or Y85-Y86

Motor Vehicle = V02-V04 or V090 or V092 or V12-V14 or V190-V192 or V194-V196 or  
V20-V79 or V803-V805 or V83-V86 or V870-V878 or V880-V888 or  
V890 or V892

Suffocation = W75-W84

Poisoning = X40-X49

Smoke, Fire & Flames = X00-X09

Falls = W00-W19

Drowning = W65-W75

Firearms = W32-W34

Other Accidents = All other accident codes not specifically mentioned above.

### SELECTED CANCER SITES

All Cancers = C00-C99

Trachea, Bronchus, Lung, Pleura = C33-C34

Colorectal = C18-C21

Breast (female) = C50 and sex is female

Prostate (male) = C61

Pancreas = C25

Leukemias = C91-C95

Non-Hodgkin's Lymphomas = C82-C85

Ovary (female) = C56

Brain and other nervous system = C70-C72

Stomach = C16

Uterus & Cervix (female) = C53-C55

Esophagus = C15

Melanoma of Skin = C43

Other = All other cancer sites not mentioned specifically above

## PUBLICATIONS AVAILABLE FROM THE CENTER FOR HEALTH STATISTICS

(Note: Many tables from these publications for 1998 through 2001 are available on the Department of Public Health Web site at [www.adph.org](http://www.adph.org), then click on Fast Find, then Health Statistics.)

CODE	TITLE/DESCRIPTION OF PUBLICATION	COST
<b>AVE</b>	<b>Alabama Vital Events (1972-1993)</b> <b>NOTE:</b> This publication is no longer available.	<b>Unavailable</b>
<b>AV1</b>	<b>Alabama Vital Events (1994-1998) - Volume I, Pregnancy Statistics</b> This annual publication contains the same information as was presented in the "Natality" section of the <u>Alabama Vital Events</u> publication for the years 1986 through 1993. Additional information on Fetal Deaths and Pregnancies have been included with natality data. <b>NOTE:</b> Limited copies of these publications are available from the Center for Health Statistics.	<b>Cost \$10.00</b>
<b>AV2</b>	<b>Alabama Vital Events (1994-1998) - Volume II, Mortality Statistics</b> This annual publication contains the same information as was presented in the "Mortality" section of the <u>Alabama Vital Events</u> publication for the years 1986 through 1993. The sub-section on Fetal Deaths has been moved from this publication into Volume I on Pregnancy Statistics. <b>NOTE:</b> Limited copies of these publications are available from the Center for Health Statistics.	<b>Cost \$10.00</b>
<b>AV3</b>	<b>Alabama Vital Events (1994-1998) - Volume III, Marriage and Divorce Statistics</b> This annual publication contains the same information as was presented in the "Marriage" and "Divorce" sections of the <u>Alabama Vital Events</u> publication for the years 1986 through 1993. <b>NOTE:</b> Limited copies of these publications are available from the Center for Health Statistics.	<b>Cost \$10.00</b>
<b>AV4</b>	<b>Alabama Vital Events (1994-1998) - Volume IV, County Profiles</b> This annual publication is an enhancement of the "Area Profile" section of the <u>Alabama Vital Events</u> publication for the years 1986 through 1993. Additional information has been included to make profile contents more valuable to the user. <b>NOTE:</b> Limited copies of these publications are available from the Center for Health Statistics.	<b>Cost \$10.00</b>
<b>AV5</b>	<b>Alabama Vital Events - Volume V, Life Expectancy (1995)</b> This publication contains tables on life expectancy by race, sex, and age group for residents of Alabama. This volume of the <u>Alabama Vital Events</u> publication is published starting with the data year 1995 and quinquennially thereafter. <b>NOTE:</b> Limited copies of these publications are available from the Center for Health Statistics.	<b>Cost \$20.00</b>
<b>AVX</b>	<b>Alabama Vital Events (1998) - Volumes I-IV</b> This code should be given when ordering a complete set of Volumes 1 through V of the <u>Alabama Vital Events</u> publication. Part V on life expectancy will be included at no additional costs during years for which this part is published.	<b>Cost \$40.00</b>
<b>AVS</b>	<b>Alabama Vital Statistics (1999-2001)</b> This code should be given when ordering the <u>2001 Alabama Vital Statistics</u> publication. This is a new publication consolidating and replacing the previously published Volumes I (AV1), II (AV2), and III (AV3) of the <u>Alabama Vital Events</u> publication.	<b>Cost \$15.00</b>
<b>CHP</b>	<b>County Health Profiles (1999-2001)</b> This annual publication has been revised and is a newly published version of what was formerly Volume IV (AV4) "County Profiles" of the <u>Alabama Vital Events</u> publication for the years 1994 through 1998. It now contains only two pages of selected data on each county, but the contents are still valuable and very useful to the user.	<b>Cost \$15.00</b>
<b>DMS</b>	<b>Detailed Mortality Statistics</b> <b>NOTE:</b> This publication is no longer available.	<b>Unavailable</b>
<b>ABR</b>	<b>Alabama Births by Residence and Occurrence</b> <b>NOTE:</b> This publication is no longer available.	<b>Unavailable</b>
<b>TBS</b>	<b>Teenage Birth Statistics</b> <b>NOTE:</b> This publication is no longer available.	<b>Unavailable</b>

**PUBLICATIONS AVAILABLE FROM THE CENTER FOR HEALTH STATISTICS-continued**

**MCH Selected Maternal and Child Health Statistics**

**\$10.00**

This annual publication contains selected information on pregnancy and events related to pregnancy including live births, fetal deaths, perinatal deaths and infant deaths. Information on deaths to Alabama residents under 20 years of age is also included. Publication contents are intended to provide information to policy makers and planners on topics of interest in maternal and child health. This publication is a supplement to Alabama Vital Events, containing approximately 97 pages, and is available for 1993 through 2000. The 2000 publication is also available, and it contains only 41 pages of tables with a supplementary booklet of graphs. Plans are being made so that the 2001 publication will be available by the end of the year 2003.

*(Additional publications on selected subjects are available upon request. The lower part of the page may be copied or detached and used as an order form. Please send check or money order made payable to the Center for Health Statistics along with your request since payment must be received prior to filling the order.)*
