INTRODUCTION

County Health Profiles and all other publications produced by the Center for Health Statistics are available at <http://www.alabamapublichealth.gov/healthstats>. This website also includes access to our statistical query system, which enables the analysis of Alabama resident birth and death data to produce frequency tables based upon a limited selection of variables.

Data for each county is displayed on two pages. Various footnotes throughout the publication, technical notes, definitions and formula sections (Appendix B) provide explanatory details regarding the methods utilized to calculate various rates and ratios.

This Page Intentionally Left Blank.

ALABAMA 2023 HEALTH PROFILE

SUMMARY		
Total Population		
		5,108,468
Births		
		57,835
Deaths		
		59,211
Median Age		
		39.5
Life Expectancy at Birth		
		75.0
Total Fertility Rate per 1,000 Females Aged 15-44		
		1,729.5
Marriages Issued	Number	35,218
	Rate*	6.9
Divorces Granted	Number	15,384
	Rate*	3.0

*Rates are per 1,000 population.

PREGNANCY/NATALITY				
	Females Aged 15-44		Females Aged 10-19	
	Number	Rate	Number	Rate
Estimated Pregnancies	72,890	73.0	4,390	13.5
Births	57,714	57.8	3,467	10.6
Induced Terminations of Pregnancy	3,303	3.3	209	0.6
Estimated Total Fetal Losses	11,873	---	714	---

Rates are per 1,000 females in specified age group.

BIRTHS BY AGE GROUP OF MOTHER					
	Total	10-14	15-17	18-19	20+
All Births	57,835	50	878	2,539	54,368
Rate	11.3	0.3	8.6	37.3	55.3
White	40,448	25	527	1,632	38,264
Rate	11.5	0.2	8.0	37.3	59.6
Black and Other	17,387	25	351	907	16,104
Rate	10.9	0.5	9.7	37.4	47.3

Rates are per 1,000 females in specified age group.

Births with unknown age of mother are included in the age group "20+".

SELECTED BIRTHS					
	Females Aged 15-44		Females Aged 10-19		
	Number	Percent	Number	Percent	
Births to Unmarried Females	26,502	45.9	3,107	89.7	
Low Weight Births	6,023	10.4	442	12.7	
Multiple Births	1,896	3.3	44	1.3	
Medicaid Births	25,755	44.6	2,785	80.4	

Percentages are of all births with known status for females in specified age group.

INFANT RELATED MORTALITY BY RACE* AND AGE GROUP OF MOTHER						
	All Ages			Ages 10-19		
	All Races	White	Black and Other	All Races	White	Black and Other
Infant Deaths	449	229	220	48	15	33
Rate per 1,000 Births	7.8	5.7	12.7	13.8	6.9	25.7
Postneonatal Deaths	166	83	83	17	4	13
Rate per 1,000 Births	2.9	2.1	4.8	4.9	1.8	10.1
Neonatal Deaths	283	146	137	31	11	20
Rate per 1,000 Births	4.9	3.6	7.9	8.9	5.0	15.6

*Infant deaths are by race of child; births are by race of mother.

2023 ESTIMATED POPULATIONS BY AGE GROUP, RACE AND SEX									
Age Group	All Races			White			Black and Other

Stroke	3,197	62.6	1,487	60.0	1,710	65.0	2,347	66.7	850	53.5
Accidents	3,556	69.6	2,423	97.7	1,133	43.1	2,542	72.2	1,014	63.8
CLRD*	3,115	61.0	1,438	58.0	1,677	63.8	2,714	77.1	401	25.2
Diabetes	1,438	28.1	812	32.8	626	23.8	926	26.3	512	32.2
Influenza and Pneumonia	962	18.8	509	20.5	453	17.2	760	21.6	202	12.7
Alzheimer's Disease	2,338	45.8	694	28.0	1,644	62.5	1,996	56.7	342	21.5
Suicide	864	16.9	679	27.4	185	7.0	740	21.0	124	7.8
Homicide	715	14.0	593	23.9	122	4.6	179	5.1	536	33.7
HIV Disease	116	2.3	85	3.4	31	1.2	34	1.0	82	5.2

Rates are per 100,000 population in specified categories.

*CLRD is known as Chronic Lower Respiratory Disease.

ACCIDENTAL DEATHS	All Ages		Ages 19 and Under	
	Number	Rate	Number	Rate
All Accidents	3,556	69.6	192	15.1
Motor Vehicle	1,075	21.0	99	7.8
Suffocation	101	2.0	19	1.5
Poisoning	1,521	29.8	21	1.7
Smoke, Fire and Flames	102	2.0	6	0.5
Falls	326	6.4	0	0.0
Drowning	68	1.3	28	2.2
Firearms	24	0.5	11	0.9
Other Accidents	339	---	8	---

Rates are per 100,000 population in specified categories.

DEATHS BY AGE GROUP		
Age Group	Number	Rate
Total	59,211	11.6
0-14	662	0.7
15-44	4,442	2.2
45-64	11,994	9.4
65-84	28,443	33.8
85+	13,670	151.2

Rates are per 1,000 population in specified age group.

SELECTED CANCER SITE DEATHS	Total		Male		Female	
	Number	Rate	Number	Rate	Number	Rate
All Cancers	10,559	206.7	5,607	226.2	4,952	188.3
Trachea, Bronchus, Lung, Pleura	2,587	50.6	1,445	58.3	1,142	43.4
Colorectal	1,000	19.6	540	21.8	460	17.5
Breast*	751	14.7	0	0.0	751	28.6
Prostate (male)	534	10.5	534	21.5	---	---
Pancreas	761	14.9	389	15.7	372	14.1
Leukemias	384	7.5	224	9.0	160	6.1
Non-Hodgkin's Lymphomas	290	5.7	166	6.7	124	4.7
Ovary (female)	211	4.1	---	---	211	8.0
Brain and Other Nervous System	327	6.4	184	7.4	143	5.4
Stomach	178	3.5	115	4.6	63	2.4
Uterus and Cervix (female)	269	5.3	---	---	269	10.2
Esophagus	233	4.6	170	6.9	63	2.4
Melanoma of Skin	128	2.5	80	3.2	48	1.8
Other	2,906	---	1,760	---	1,146	---

Rates are per 100,000 population in specified categories.

* Due to extreme low number of male breast cancer deaths, they are only included in the state health profile and are excluded from the county health profiles.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or 1,000 population are shaded. See the appendices for definitions, formulas, sources of data and other related information.

AUTAUGA 2023 HEALTH PROFILE

SUMMARY	
Total Population	60,342
Births	714
Deaths	597
Median Age	39.5
Life Expectancy at Birth	76.7
Total Fertility Rate per 1,000 Females Aged 15-44	1,873.5
Marriages Issued	433
Divorces Granted	197

PREGNANCY/NATALITY				
	Females Aged 15-44		Females Aged 10-19	
	Number	Rate	Number	Rate
Estimated Pregnancies	906	77.1	41	10.5
Births	711	60.5	32	8.2
Induced Terminations of Pregnancy	48	4.1	2	0.5
Estimated Total Fetal Losses	147	---	7	---

Rates are per 1,000 females in specified age group.

BIRTHS BY AGE GROUP OF MOTHER					
	Total	10-14	15-17	18-19	20+
All Births	714	0	4	28	682
Rate	11.8	0.0	3.5	36.6	57.8
White	540	0	3	19	518
Rate	12.0	0.0	3.7	35.4	61.6
Black and Other	174	0	1	9	164
Rate	11.3	0.0	2.9	39.7	48.3

Rates are per 1,000 females in specified age group.

Births with unknown age of mother are included in the age group "20+".

SELECTED BIRTHS				
	Females Aged 15-44		Females Aged 10-19	
	Number	Percent	Number	Percent
Births to Unmarried Females	269	37.8	28	87.5
Low Weight Births	68	9.6	4	12.5
Multiple Births	26	3.7	2	6.3
Medicaid Births	238	33.5	23	71.9

Percentages are of all births with known status for females in specified age group.

INFANT RELATED MORTALITY BY RACE* AND AGE GROUP OF MOTHER						
	All Ages			Ages 10-19		
	All Races	White	Black and Other	All Races	White	Black and Other

Rates are per 100,000 population in specified categories.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or 1,000 population are shaded. See the appendices for definitions, formulas, sources of data and other related information.

TECHNICAL NOTES

SOURCES OF DATA

Data in this publication are from certificates and reports filed with the Center for Health Statistics (CHS) in the Alabama Department of Public Health according to Alabama Vital Statistics Laws. The State Registrar of Vital Records enforces the laws and administers the system of vital statistics. Certificates (birth, death, marriage, and divorce) and reports (fetal death and induced termination of pregnancy) provide most of the information included in this publication. The statewide data for Alabama are also sent to the National Center for Health Statistics (NCHS) for inclusion in national reports and tabulations.

BIRTHS. If a birth occurs in a birthing hospital, the birth certificate is filed by that hospital with CHS. Information on a birth certificate is obtained from a parent and from medical files for the mother and infant. All birthing hospitals in Alabama use an internet-based Electronic Birth Registration System to complete and transmit birth certificates to CHS. If a birth occurs outside of a birthing hospital, the birth information is submitted by the parent or staff in non-birthing facility who is aware of the facts of birth. Because the legal requirements for certified copies of births have increased, 100 percent of all births are filed with CHS.

In 2014, CHS implemented the revised certificate of birth. Capturing data from the revised certificate now makes Alabama data more comparable with other states.

DEATHS. Mortality data are obtained from death certificates filed with CHS. In Alabama, the funeral director who first takes custody of the body is responsible for obtaining the demographic data from the next of kin and filing the death certificate. The medical certification is completed by the medical professional in charge of the care of the decedent for the illness or condition that resulted in death or by the county medical examiner or coroner. Registration of deaths is thought to be nearly 100 percent complete since the death certificate is needed by the next of kin for legal purposes. In addition, listings of deaths, which are independently prepared by funeral directors, coroners, hospitals, nursing homes and other institutions where deaths occur, are compared to certificates received to ensure that all deaths are filed.

In 2016, CHS implemented the revised certificate of death. Capturing data from the revised certificate now makes Alabama data more comparable with other states.

MARRIAGES. Starting August 29, 2019, marriage licenses are no longer issued and certified in Alabama. On and after that date, a marriage certificate is completed by the persons entering the marriage and delivered to a county probate court. The certificate is recorded by the probate court who forwards it to CHS. Marriage data are believed to be nearly 100 percent representative of valid marriage certificates recorded in the probate courts.

DIVORCES. Divorce certificates are prepared by the petitioner or his or her legal representatives and presented to the clerk of a court where divorces are granted. The court clerk completes the information certifying the divorce and forwards the certificate to CHS. While the law does require the divorce certificate to be filed before a divorce is granted, the

filing of these records may not be as complete as other vital records since court procedures vary.

FETAL DEATHS. Reports of fetal death are required to be filed with CHS if the fetus has advanced to or beyond the twentieth week of utero-gestation. If the fetal death occurs in an institution, the person in charge of the institution or his or her representative is responsible for filing the report. If the fetal death occurs outside of an institution, the medical professional/coroner who is aware of the fact of the event is responsible for filing the report. Since not all fetal deaths are medically attended, it is likely that there is some under-reporting of these events. Evidence indicates that reporting may be better in metropolitan counties.

In 2014, CHS implemented the revised report of fetal death. Capturing data from the revised report now makes Alabama data more comparable with other states.

INDUCED TERMINATIONS OF PREGNANCY. Since 1993, reports of induced termination of pregnancy have been required for all events occurring in Alabama. If the induced termination of pregnancy occurs in an institution, the person in charge of the institution is required to file the report. If the induced termination of pregnancy occurs outside of an institution, the physician in attendance is required to file the report. From September 1987 to December 1992, the only reporting requirement for induced terminations of pregnancy was for events to females under 18 years of age as part of the Parental Consent Act. The degree of completeness for these reports is not known. However, if CHS learns of institutions that are not aware of the reporting requirements, they are contacted, and reporting is immediately initiated.

OUT OF STATE EVENTS. To have complete data for state residents, offices of vital statistics in all states have entered into an agreement to share data for statistical purposes. When a report or certificate is filed for a vital event that occurred in Alabama to a resident of another state or Canada, Alabama notifies that government. Likewise, Alabama receives information and reports about events happening to Alabama residents in other states or in Canada. Data from these out of state events are included in the tabulations of resident data presented in this publication.

Most states send reports of out of state events to CHS on an ongoing basis, and these reports are believed to be complete since laws and procedures in other states are similar to Alabama's. The exceptions are reports of induced termination of pregnancy which have different reporting requirements in other states. Florida, a neighboring state, does not have a procedure for reporting induced terminations of pregnancy for Alabama residents to CHS. Since it is unknown how many Alabama residents might have these events in neighboring states, the number of reported induced terminations of pregnancy for Alabama residents might be somewhat low.

QUALITY AND COMPLETENESS OF DATA

Certificates and reports received at CHS are reviewed to ensure all information has been entered correctly. If records are found to be incomplete or completed improperly, queries are submitted to obtain the information. Once the information is accurate and consistent, the record is accepted into the official vital records files for Alabama.

Data for 100 percent of the births and fetal deaths are submitted by hospitals through the Electronic Birth Registration System. This electronic system contains edits and consistency checks to verify data prior to being submitted.

Data for approximately 99 percent of the deaths were submitted through the Electronic Death Registration System in 2023. This electronic system contains edits and consistency checks to verify data prior to being submitted. The remainder of the deaths are filed using paper certificates. These certificates are manually checked for accuracy and completeness. If data are incomplete or missing, the provider is queried and asked to verify the information provided or to furnish the correct data. Once these certificates are complete, they are keyed into a computer database by CHS staff.

Data for approximately 96 percent of the divorces are received electronically from the Administrative Office of Courts. The remainder of the divorces are filed using the paper certificate. These certificates are manually checked for accuracy and completeness. If data are incomplete or missing, the provider is queried and asked to verify the information provided or to furnish the correct data. Once these certificates or reports are complete, they are keyed into a computer database by CHS staff.

Data for induced terminations of pregnancy and marriages are manually checked for accuracy and completeness. If data are incomplete or missing, the provider is queried and asked to verify the information provided or to furnish the correct data. Once these certificates or reports are complete, they are keyed into a computer database by CHS staff.

Numerous edits and consistency checks are performed on all computer files to ensure the data are as accurate as possible. Additional procedures cross check that all births and deaths are reported, particularly infant deaths.

RESIDENCE DATA

Unless specifically noted otherwise, data from vital events in this publication are reported according to the county or place of residence where the person, patient or decedent actually lived. Birth, fetal death and induced termination of pregnancy statistics are reported according to the mother's residence. Deaths are reported by the residence of the decedent. The exceptions are marriage and divorce data that are reported by the residence of the decedent. The exceptions are marriage and divorce data that are reported according to the county where the marriage certificate was issued, or the divorce was finalized.

Vital events for Alabama residents occurring in other states and Canada are also included in the residence data in this publication. See discussion under SOURCES OF DATA – OUT OF STATE EVENTS.

POPULATION DENOMINATORS

Different population denominators have been used in this publication depending on the year. For 1990, 2000, 2010, and 2020, actual Census counts were used for the denominators for the rates. For the years 1991 through 1999, the population figures used were prepared by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama (CBER) projecting forward from the 1990 Census. Caution should be used in comparing rates over time, since the further away from the Census, the less accurate the populations and associated rates become. Based on 2000 Census data,

the CBER population projections for the late 1990s appear to be too low, and thus the rates for those years may be too high.

Population figures used to calculate rates for 2001 and 2002 were again from projections provided by CBER. These population figures were based on 2000 U.S. Census counts and projecting forward. Beginning in 2003, U.S. Census estimates (rather than CBER projections) were used for population denominators in CHS publications.

The rates in this publication may not be the same as those given in other publications if population data are from a different source. For the years between decennial national Censuses, the National Center for Health Statistics (NCHS) calculates crude rates using population estimates provided by the U.S. Census Bureau. These figures are calculated in retrospect based on various housing, labor and vital statistics.

RACE

Birth, fetal death and induced termination of pregnancy statistics are reported according to the race of the mother since many of the health conditions related to these events are directly associated with the mother. Deaths are reported by the race of the decedent. Infant deaths are also tabulated by the race of the infant. However, the infant mortality rates, with the number of births used as the denominator, are based on the race of the mother. Data for marriages and divorces are shown for both parties to the event.

RACE IN MARRIAGE, DIVORCE AND INDUCED TERMINATION OF PREGNANCY. For processing purposes, 10 racial groups were used: White, Black, American Indian, Chinese, Japanese, Hawaiian, Filipino, Other Asian or Pacific Islander, other entries and unknown race. However, for tables shown in this publication, these groups are consolidated into “White” and “Black and Other”. “White” encompasses Mexican, Puerto Rican, Cajun, Creole and Other Caucasian. The “Black and Other” group includes Black, American Indian, Chinese, Japanese, Hawaiian, Filipino and Other Asian or Pacific Islander. Events of unknown race are included in the “White” category.

RACE IN LIVE BIRTH, DEATH AND FETAL DEATH. In 2014, Alabama implemented the most recent NCHS revisions of the U.S. Standard Certificate of Live Birth and Fetal Death which allows parent(s) to select more than one race. In 2016, Alabama implemented the most recent NCHS revisions of the U.S. Standard Certificate of Death which allows informant(s) to select more than one race for decedent. Twenty racial groupings are now used: White, Black, American Indian, Asian Indian, Chinese, Filipino, Japanese, Korean, Vietnamese, Hawaiian, Other Asian or Pacific Islander, Guamanian or Chamorro, Samoan, other entries, Bridged White, Bridged Black, Bridged American Indian/Alaska Native, Bridged Asian/Pacific Islander and unknown race. However, for tables shown in this publication, these groups are consolidated into two categories: “White” and “Black and Other”. “White” encompasses Mexican, Puerto Rican, Cajun, Creole, Other Caucasian and Bridged White. The “Black and Other” group includes Black, American Indian, Asian Indian, Chinese, Filipino, Japanese, Korean, Vietnamese, Hawaiian, Other Asian or Pacific Islander, Guamanian or Chamorro, Samoan, other entries, Bridged Black, Bridged American Indian/Alaska Native and Bridged Asian/Pacific Islander. Events of unknown race are included in the “White” category.

Population figures from the 2023 Census show the population for Alabama as 68.9 percent White, 26.6 percent Black and 4.5 percent other races. Just over two percent of the population reported two or more races and were included in the “Black and Other” population for tables shown in this publication.

CAUSE OF DEATH

Alabama law requires the physician in charge of the care of the patient for the illness or condition that resulted in death to complete the medical certification section on the death certificate. The physician is requested to state the diseases or conditions that caused the death and other significant conditions contributing to death. If a death occurs with no medical professional in charge of the patient’s care, the county coroner, or in a few counties, the medical examiner is responsible for determining the cause of death.

CLASSIFICATION. For tabulation purposes, causes of death are coded according to the *International Classification of Diseases*¹ (ICD) which provides the essential ground rules for the coding and classification of cause of death data. ICD was developed collaboratively between the World Health Organization (WHO) and 10 international centers, one of which is housed at NCHS. The purpose of ICD is to promote international comparability in the collection, classification, processing and presentation of health statistics. The United States is required to use ICD under an agreement with WHO that has the force of an international treaty.

Besides being a classification system for the cause of death, ICD includes coding rules. These rules identify the single condition on the death certificate considered most informative from a public health point of view, called the *underlying cause of death*. The underlying cause is the disease or injury initiating the sequence of events that led directly to death or the circumstances of the accident or violence that produced the fatal injury.

Cause of death data in this publication are coded according to procedures established by NCHS². Starting with death records for 1999, cause of death data are processed through computer software programs from NCHS which allow CHS staff to enter the literal information provided by the physician or coroner in the medical certification section of the death certificate. The software programs are written to apply WHO rules to select the underlying cause of death from all the conditions given on the death certificate. Tables in this publication contain the underlying cause of death as determined through these procedures.

TABULATION LISTS AND CAUSE OF DEATH RANKINGS. For dissemination and presentation of data, NCHS developed several tabulation lists which group causes of death codes into categories that are of public health interest and medical importance. The lists have increasing levels of detail or are for specific categories of death and are published in Part 9 of the NCHS Instruction Manual Series³. Certain groups of causes on these lists are used for ranking causes of death to determine the leading causes of death. Starting with 1999 data, the list most widely used to identify and rank the leading causes of death in the United States is the *ICD-10 List of 113 Selected Causes of Death*. This list replaces the *ICD-9 List of 72 Selected Causes of Death* used from 1979 through 1998. A condensed list of selected causes was also developed to present cause of death data in Alabama.

CHANGE IN ICD. The ICD has been revised approximately once every 10 years to stay abreast with advances in medical science and to ensure the international comparability

of health statistics. The tenth and most recent revision, known as the ICD-10, was first used to classify deaths that occurred on January 1, 1999 and after. The previous version, the ICD-9, was used from 1979 through 1998. The ICD-10 is much more detailed with about 8,000 possible categories for cause of death compared with 4,000 categories in the previous version. For the first time, the ICD-10 uses alphanumeric codes. In the tenth revision of the ICD, cause of death titles have been changed and conditions have been regrouped. Some coding rules have also been changed. In addition, ICD-10 tabulation lists used in publications have also changed, so mortality data prepared under different revisions of the ICD may not be comparable.

COMPARISON OF CAUSE OF DEATH DATA. Changes in moving to a new revision of the ICD can cause major discontinuities in trend data for certain causes of death. To understand the changes in mortality rates that are simply due to the new ICD revision, NCHS double codes a large sample of deaths under each revision to develop *comparability ratios*. This is simply the ratio of deaths coded under the new revision (ICD-10) divided by the number under the old revision (ICD-9) for a particular cause of death. These ratios are given in Robert Anderson, *et. al.*, *Comparability of Cause of Death between ICD-9 and ICD-10: Preliminary Estimates*, Hyattsville, MD, National Vital Statistics Reports, Volume 49, Number 2, May 18, 2001. Comparability ratios can be applied to specific cause of death groups that were coded under ICD-9 to see how many deaths in that specific group would result if those same deaths had been coded under the new ICD-10. Application of the comparability ratios is crucial in time trend analyses. For additional information on comparability ratios, see the NCHS web site at www.cdc.gov/nchs.

HANDLING OF UNKNOWNNS

Items with a missing value or a response of “unknown” are shown as “not stated” in tables of frequency distributions and are included in totals and subtotals. However, for calculation of rates and ratios, “unknowns” are subtracted from denominators before calculations are made.

The only exceptions to this rule are for race, sex and county of residence. Events with race “unknown” are included with “White” for tabulation purposes. If sex cannot be determined, sex is considered male if the date of the event is odd and female if the day is even. Events with county of residence “unknown” are included in the statewide number. Therefore, the statewide number may be higher than the combined county numbers.

DATA TECHNIQUES

Data in this publication are generally presented as frequencies, rates, ratios and percentages. Frequency distributions tell how many times an event occurred for a particular population. For purposes of comparison, rates, ratios and percentages are provided to standardize the figures. A ratio is a comparison of two quantities and is generally expressed as a fraction. A rate is the number of times having a certain characteristic divided by the total number of items. Rates are generally expressed to a standard base of 100, 1,000, or 100,000. Percentages are rates standardized to a base of 100. Rounding errors may exist because of the estimation techniques.

Demographic rates make all populations equal in size. Demographic rates such as the death rate and birth rate are calculated by dividing the number of events in a given period

by the population at risk during that period. Thus, rates give the number of events per person, or the average. By standardizing all populations to the same size, we eliminate one factor that makes comparisons among areas difficult.

The base of demographic rate may be the total population or a sub population. Rates based on the total population are called crude rates. Others are called specific rates such as age-specific rates used for children or teenage populations or the sex-specific rate for prostate cancer. For information on specific calculations, see Appendix B – ALABAMA VITAL STATISTICS FORMULAS.

SMALL NUMBER LIMITATIONS

When using vital events data for studying small geographic areas or for examining specific medical or social factors, the number of events reported in a given year may be very small. Understanding the statistical limitations of small numbers is important in conducting analyses. Any time something is measured, error is almost inevitable. Error can be based on the accuracy of the reports, or alternately, the number of the events or the size of the population. Some error is random, and when the numbers are very large, random error does not affect the usefulness of the data. However, when the number of vital events is very small or the population of the area is very low, random errors in data collection, or even randomly occurring events, can cause drastic fluctuations in rates.

One way to counteract random error is to increase the number of years or enlarge the area being studied. Otherwise, calculations may be correct, but of very limited practical value. In this publication, rates are given regardless of their stability; however, for rates based on very small numbers, warnings are issued in the footnotes.

DEFINITIONS

Some definitions used in this publication may vary in meaning among states or nations. Also, some subjects change in definition over time. Center for Health Statistics definitions are consistent for all publications within a given year and are generally the same definitions used by the National Center for Health Statistics. However, a data user should always compare definitions across geographical areas and times.

ABORTION - See INDUCED TERMINATION OF PREGNANCY. In this publication, the terms *abortion* and *induced termination of pregnancy* are used synonymously.

ADEQUACY OF PRENATAL CARE UTILIZATION INDEX (APNCU) - This index, also known as the Kotelchuck Index of Prenatal Care, was designed as an improvement on the Kessner Index. It has 5 values: 1 = adequate plus, 2 = adequate, 3 = intermediate, 4 = inadequate and 5 = unknown. Its major advantage is that it divides the adequate into two categories. Those with adequate plus had other risk factors, which increased the number of visits. The index can serve as an indicator that some medical condition required additional prenatal care. [Kotelchuck M., "An Evaluation of the Kessner Adequacy of Prenatal Care Index and a Proposed Adequacy of Prenatal Care Utilization Index", *American Journal of Public Health*, 1994, 84(9):1414-20.]

ANNULMENT - "To nullify, to abolish, to make void by competent authority. An annulment differs from a divorce in that a divorce terminates a legal status, whereas an annulment establishes that a marital status never existed." *Black's Law Dictionary, Sixth Edition*. In this publication, annulments are included with divorces for rate calculation purposes and are available only by place of occurrence.

BIRTH - See LIVE BIRTH. In this publication, the terms *live birth* and *birth* are used synonymously.

BIRTH INTERVAL - The period from the date of the current birth to the date of the last termination of pregnancy, birth or otherwise.

BIRTH ORDER - The numeric relationship of a child to other children born alive to that mother.

CAUSE OF DEATH - The cause of death presented in this publication is the "underlying cause" which is defined as the cause deemed responsible for the sequence of morbid events leading directly to death or the circumstances of the accident or violence that produced the fatal injury. Deaths, by cause, are classified according to the *International Classification of Diseases (ICD), Tenth Revision*, following instructions established by the National Center for Health Statistics. See Appendix C for the compilation lists and ICD-10 codes used for the leading cause of death.

DEATH - Death is defined in *Black's Law Dictionary, Sixth Edition* as "the cessation of life; permanent cessations of all vital functions and signs." For definitions of the determination of death under other than general circumstances, the *Code of Alabama* should be consulted.

DIVORCE - A court decree dissolving a marital relationship. A divorce from bed and board is a separation from cohabitation which does not otherwise affect the marriage and is not included in this publication. See *Code of Alabama* for additional information. For rate calculation purposes in this publication, divorces include annulments and are reported by the county where the divorce occurred.

ESTIMATED PREGNANCIES - The sum of births, induced terminations of pregnancy and estimated total fetal losses. Rounding errors may exist because of the estimation techniques.

ESTIMATED TOTAL FETAL LOSSES - This term, which is a component used in determining the number of estimated pregnancies, is an estimate of the total number of fetal losses regardless of the gestational age of the fetus. Estimated total fetal losses are equal to the sum of 20 percent of births and 10 percent of induced terminations of pregnancy. This formula was developed by the Alan Guttmacher Institute and is widely accepted and used. Rounding errors may exist because of the estimation techniques. Estimated total fetal losses should be distinguished from the term fetal deaths as used in this publication.

FETAL DEATH - "Death prior to the complete expulsion or extraction from the mother of a product of human conception, irrespective of the duration of pregnancy and which is not an induced termination of pregnancy. The death is indicated by the fact that after the expulsion or extraction the fetus does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps." *Code of Alabama, 1975, Section 22-9A-1*. While the definition of fetal death includes all gestations, only fetal deaths that have advanced to or are beyond the twentieth week of utero-gestation are required to be reported under Alabama law and are the only ones counted as fetal deaths in this publication.

GESTATION - The period of development from the time of fertilization of the ovum to birth. In these publications, the terms *gestation* and *utero-gestation* are used synonymously.

INDUCED TERMINATION OF PREGNANCY - "The purposeful interruption of an intrauterine pregnancy with the intention other than to produce a liveborn infant and which does not result in a live birth. This definition excludes management of prolonged retention of products of conception following fetal death." *Code of Alabama, 1975, Section 22-9A-1*. In these publications, the terms *induced termination of pregnancy* and *abortion* are used synonymously.

INFANT DEATH - Death of a live born infant before one year of age.

INTERNATIONAL CLASSIFICATION OF DISEASES (ICD) - A publication of the World Health Organization (WHO) that provides the essential ground rules for the coding and classification of cause of death data. The purpose of the ICD and of WHO sponsorship is to promote international comparability in the collection, classification, processing and presentation of health statistics. In addition to being a classification system, the rules provide for identification of a single condition on the death certificate that is considered most informative from a public health point of view, called the underlying cause of death.

LIVE BIRTH - "The complete expulsion or extraction from the mother of a product of human conception, irrespective of the duration of the pregnancy, which, after such expulsion or extraction, breathes or shows any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached. Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps." *Code of Alabama, 1975, Section 22-9A-1*. In these publications, the terms *live birth* and *birth* are used synonymously.

LOW BIRTH WEIGHT - A weight at birth of under 2,500 grams or under five pounds and eight ounces.

MARRIAGE – The legal union of two persons which establishes their relationship as spouses. Marriage data are reported by the county where the marriage license was issued (prior to August 29, 2019) or the county where the marriage certificate was recorded (on or after August 29, 2019).

MATERNAL DEATH - Defined by WHO as "the death of a woman while pregnant or within 42 days of termination of pregnancy, irrespective of the duration and the site of pregnancy from any cause of the pregnancy or its management, but not from accidental or incidental causes." Included in these deaths are ICD-10 codes A34, O00-O95 and O98-O99.

NEONATAL DEATH - Death of a liveborn infant occurring within the first 27 days of life.

OCCURRENCE DATA - Data compiled as to the geographical place where the event occurred.

PERINATAL DEATH - Death of a fetus of 28 or more weeks gestation or death of a liveborn infant under seven days of age. Note that several other definitions of this term exist.

POSTNEONATAL DEATH - Death of a liveborn infant after the first 27 days of age but before one year of age.

RESIDENT DATA - Data compiled as to the place of residence without regard to the geographical place where the event occurred. For births and fetal deaths, place of residence of mother is used.

TEENAGE - In this publication, persons aged 10 years through 19 years.

TOTAL FERTILITY RATE – The estimated number of births a group of females would have by the end of their reproductive lifetimes if the age-specific birth rates in a given year continued throughout their childbearing years. The total fertility rate is the sum of the age-specific birth rates multiplied by their respective five-year age intervals. In this publication, the rates indicate the average expected number of children that would be born per 1,000 females aged 15-44 in the specified population.

VERY LOW BIRTH WEIGHT - A weight at birth of under 1,500 grams or under three pounds and five ounces.

FORMULAS

$$\text{ABORTION RATE} = \frac{\text{Number of Abortions}}{\text{Estimated Female Population Aged 15-44}} \times 1,000$$

$$\text{AGE-SPECIFIC BIRTH RATE} = \frac{\text{Number of Live Births to Females in Specific Age Group}}{\text{Estimated Female Population in Specific Age Group}} \times 1,000$$

$$\text{AGE-SPECIFIC DEATH RATE} = \frac{\text{Number of Deaths for Specific Age Group}}{\text{Estimated Population in Specific Age Group}} \times 1,000$$

$$\text{AGE-SPECIFIC PREGNANCY RATE} = \frac{\begin{array}{c} \text{Number of Live Births to Females in Specific Age Group} + \\ \text{Abortions to Females in Specific Age Group} + \\ \text{Total Estimated Fetal Losses to Females in Specific Age Group} \end{array}}{\text{Estimated Female Population in Specific Age Group}} \times 1,000$$

$$\text{BIRTH RATE or CRUDE BIRTH RATE} = \frac{\text{Number of Live Births}}{\text{Estimated Midyear Population}} \times 1,000$$

$$\text{CAUSE-SPECIFIC DEATH RATE} = \frac{\text{Number of Deaths for Specific Cause}}{\text{Estimated Midyear Population}} \times 100,000$$

$$\text{CAUSE-SPECIFIC INFANT MORTALITY RATE} = \frac{\text{Number of Deaths Before One Year of Age for Specific Cause}}{\text{Number of Live Births}} \times 100,000$$

$$\text{CESAREAN DELIVERY RATE} = \frac{\begin{array}{c} \text{Number of Live Births Delivered by Primary Cesarean} + \\ \text{Number of Live Births Delivered by Repeat Cesarean} \end{array}}{\text{Number of Live Births with Known Methods of Delivery}} \times 100$$

$$\text{DEATH RATE or CRUDE DEATH RATE} = \frac{\text{Number of Deaths}}{\text{Estimated Midyear Population}} \times 1,000$$

$$\text{DIVORCE RATE (DISSOLUTION)} = \frac{\text{Number of Divorces and Annulments}}{\text{Estimated Midyear Population}} \times 1,000$$

FORMULAS (Continued)

$$\text{ESTIMATED PREGNANCIES} = \text{Number of Live Births} + \text{Number of Abortions} + \text{Estimated Total Fetal Losses}$$

$$\text{ESTIMATED TOTAL FETAL LOSSES} = 20 \text{ Percent of Live Births} + 10 \text{ Percent of Abortions}$$

$$\text{FETAL DEATH RATIO}^* = \frac{\text{Number of Fetal Deaths 20 or More Weeks in Gestation}}{\text{Number of Live Births}} \times 1,000$$

*The definition of a fetal death varies from state to state. Caution should be exercised in comparing this ratio between states.

$$\text{GENERAL FERTILITY RATE} = \frac{\text{Number of Live Births}}{\text{Estimated Female Population Aged 15-44}} \times 1,000$$

$$\text{INFANT MORTALITY RATE} = \frac{\text{Number of Deaths Before One Year of Age}}{\text{Number of Live Births}} \times 1,000$$

$$\text{MARRIAGE RATE} = \frac{\text{Number of Marriages}}{\text{Estimated Midyear Population}} \times 1,000$$

$$\text{MONTHLY BIRTH RATE} = \frac{\text{Number of Live Births During Month}}{(\text{Number of Days in Month/Number of Days in Year}) \times \text{Estimated Midyear Population}} \times 1,000$$

$$\text{MONTHLY DEATH RATE} = \frac{\text{Number of Deaths During Month}}{(\text{Number of Days in Month/Number of Days in Year}) \times \text{Estimated Midyear Population}} \times 1,000$$

$$\text{MONTHLY MARRIAGE RATE} = \frac{\text{Number of Marriages During Month}}{(\text{Number of Days in Month/Number of Days in Year}) \times \text{Estimated Midyear Population}} \times 1,000$$

$$\text{NEONATAL MORTALITY RATE} = \frac{\text{Number of Deaths Under 28 Days of Age}}{\text{Number of Live Births}} \times 1,000$$

FORMULAS (Continued)

$$\text{POSTNEONATAL MORTALITY RATE} = \frac{\text{Number of Deaths 28 or More Days But Before One Year of Age}}{\text{Number of Live Births}} \times 1,000$$

$$\text{PREGNANCY RATE} = \frac{\text{Number of Live Births} + \text{Number of Abortions} + \text{Estimated Total Fetal Losses}}{\text{Estimated Female Population Aged 15-44}} \times 1,000$$

$$\text{TEENAGE ABORTION RATE} = \frac{\text{Number of Abortions to Females Aged 10-19}}{\text{Estimated Female Population Aged 10-19}} \times 1,000$$

$$\text{TEENAGE BIRTH RATE} = \frac{\text{Number of Live Births to Females Aged 10-19}}{\text{Estimated Female Population Aged 10-19}} \times 1,000$$

$$\text{TEENAGE PREGNANCY RATE} = \frac{\begin{array}{l} \text{Number of Live Births to Females Aged 10-19} \\ + \text{Number of Abortions to Females Aged 10-19} \\ + \text{Estimated Total Fetal Losses to Females Aged 10-19} \end{array}}{\text{Estimated Female Population Aged 10-19}} \times 1,000$$

$$\text{TOTAL FERTILITY RATE}^* = \begin{array}{l} (\text{Age-Specific Birth Rate for Females Aged 15-19 X Age Interval} \\ \text{in Age Group}) + (\text{Age-Specific Birth Rate for Females Aged} \\ \text{20-24 X Age Interval in Age Group}) + (\text{Age-Specific Birth Rate} \\ \text{for Females Aged 25-29 X Age Interval in Age Group}) + (\text{Age-} \\ \text{Specific Birth Rate for Females Aged 30-34 X Age Interval in Age} \\ \text{Group}) + (\text{Age-Specific Birth Rate for Females Aged 35-39 X Age} \\ \text{Interval in Age Group}) + (\text{Age-Specific Birth Rate for Females} \\ \text{Aged 40-44 X Age Interval in Age Group}) \end{array}$$

*Some states, including Alabama, do not consider age groups 10-14 and 45-49 in this computation. Caution should be exercised in comparing total fertility rates.

$$\text{VAGINAL BIRTH AFTER CESAREAN RATE} = \frac{\begin{array}{l} \text{Number of Vaginal Live Births after Cesarean} \\ \text{Number of Live Births with a Vaginal Live Birth after Cesarean} \\ + \text{Number of Live Births with a Repeat Cesarean} \end{array}}{\text{Number of Live Births with a Vaginal Live Birth after Cesarean} + \text{Number of Live Births with a Repeat Cesarean}} \times 1,000$$

ICD-10 CODES USED IN THE COUNTY HEALTH PROFILES

SELECTED DEATHS

Heart Disease	I00-I09, I11, I13, I20-I51
Cancer	C00-C99
COVID-19	U071
Stroke	I60-I69
Accidents	V01-X59, Y85-Y86
Chronic Lower Respiratory Disease (CLRD)	J40-J47
Diabetes	E10-E14
Influenza and Pneumonia	J09-J18
Alzheimer's Disease	G30
Suicide	X60-X84, Y870
Homicide	X85-Y09, Y871
HIV Disease	B20-B24

ACCIDENTAL DEATHS

All Accidents	V01-X59, Y85-Y86
Motor Vehicle	V02-V04, V090, V092, V12-V14, V190-V192, V194-V196, V20-V79, V803-V805, V83-V86, V870-V878, V880-V888, V890, V892
Suffocation	W75-W84
Poisoning	X40-X49
Smoke, Fire and Flames	X00-X09
Falls	W00-W19
Drowning	W65-W75
Firearms	W32-W34
Other Accidents	All other accident codes not specifically mentioned above

SELECTED CANCER SITES

All Cancers	C00-C99
Trachea, Bronchus, Lung, Pleura	C33-C34
Colorectal	C18-C21
Breast	C50
Prostate (male)	C61
Pancreas	C25
Leukemias	C91-C95
Non-Hodgkin's Lymphomas	C82-C85
Ovary (female)	C56
Brain and other nervous system	C70-C72
Stomach	C16
Uterus and Cervix (female)	C53-C55
Esophagus	C15
Melanoma of Skin	C43
Other	All other cancer sites not specifically mentioned above
