

# Alabama Hepatitis A Virus Outbreak

Updated May 1, 2020

## Key Points:

484 outbreak cases

38 years average age

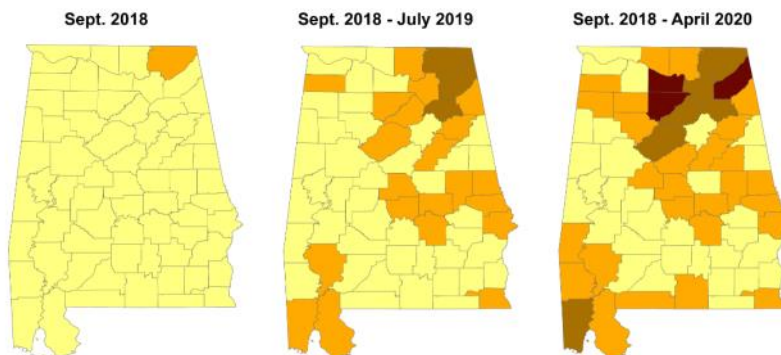

61% male

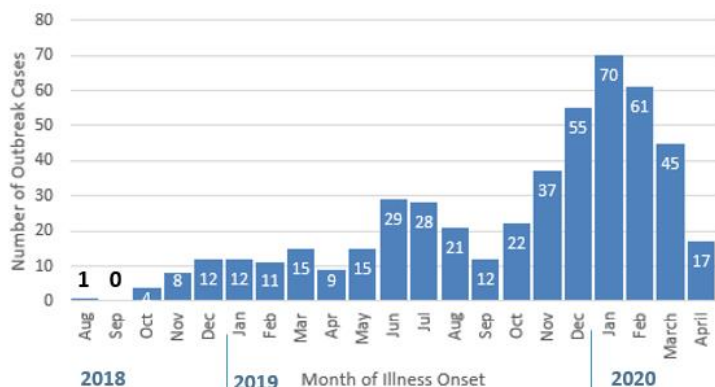

66% hospitalized

**The number of Hepatitis A virus (HAV) outbreak cases continues to increase in Alabama.** Alabama is part of a national outbreak of HAV. The outbreak started in northeast Alabama in September 2018 and has spread throughout the state by December 2019. HAV is spread person-to-person through poop to mouth contact among unvaccinated persons.

Categories for Number of Cases per County: 0 (yellow), 1-15 (orange), 16-40 (dark orange), 41-69 (dark red)

### Hepatitis A Outbreak Cases by Month

**Forty-five cases of HAV were reported in March 2020.** To prevent the spread of HAV, individuals with risk factors should receive the HAV vaccine

**Those at highest risk for HAV infection** include people who use street drugs (injection or non-injection), who are currently or previously incarcerated, who are experiencing unstable housing or homelessness, or who engage in oral or anal sex. The following describes outbreak associated HAV cases in Alabama.

68%

Used street drugs  
(Injection or non-injection)

45%

Reported previous incarceration

37%

Reported oral or anal sex

15%

Have experienced homelessness

**Protect yourself against HAV, get vaccinated today.** One dose of HAV vaccine provides long-lasting protection in up to 95% of those who receive it. To find a provider, pharmacy or health department with the vaccine near you, check out the following website <https://tinyurl.com/yveh4cav>.
