

PrEP

What is PrEP?

PrEP (pre-exposure prophylaxis) is a once-a-day pill taken to prevent HIV)

The benefits of PrEP

When taken consistently, PrEP can reduce the risk of contracting HIV by 99%.

ABOUT
↓ 99%
LOWER RISK

PrEP is most effective when combined with condoms and other prevention tools.

PrEP is recommended for anyone wanting to prevent HIV and is for those who are:

- Sexually active with a HIV+ partner
- Sexually active with men who have sex with men, more than one partner, or your partner has more than one partner.
- Having anal or vaginal sex and not consistently using condoms.
- An intravenous drug user who shares needles, syringes, or other equipment to inject drugs.
- Non-intravenous drug user.

Talk to a doctor. Ask about pre-exposure prophylaxis (PrEP).
