

STD Awareness Month 30 Sec PSA

Every year, there are nearly 10 million new STD and STI cases among teens. While STDs and STIs can be treated, they may have lasting effects like increased rates of cancer, infertility, and increased chances of contracting HIV. Sexually transmitted diseases can be prevented. Barrier methods – like condoms – decrease the risk of STDs during intercourse. However, the surest way to avoid STDs and STIs is to abstain from sexual intercourse.

Protect your health, and find out more at Alabama-healthy-teens-dot-com.
