Sleep-Related Infant Deaths and Opportunities for Prevention

Michael D. Warren, MD MPH FAAP
Division of Family Health and Wellness
Disclosures

• I have no relevant financial disclosures.

• I will not be discussing any unapproved or off-label uses of therapeutic agents of products.
Well Actually, One Disclosure…

- Even my family doesn’t get it right all the time….
Michael Warren Uncle Mike is cool with this since they are both awake. Then its ABC (Alone, on his Back, and in a Crib) for Mr. Sawyer! Love you guys...see you in a couple of hours.
Objectives

• At the end of this presentation, the learner will be able to:
  – Identify the latest recommendations for infant safe sleep and understand the rationale for the recommendations.
  – Describe state-level public health efforts implemented in Tennessee to reduce sleep-related infant deaths.
Before We Begin…
Putting Things in Perspective

• In 2009, 286 pediatric deaths **nationwide** (height of H1N1 epidemic)

• Standard recommendations for vaccination

• Drastic public health measures taken to reduce spread (i.e. school closings)

Before We Begin…
Putting Things in Perspective

• Influenza results in 100-200 deaths annually among children nationwide.

• Given the energy that goes into preventing influenza-related deaths, what should we do for something that killed 101 infants in Alabama last year?

Source: Communication from Amy Stratton, Alabama Department of Public Health, 10/7/2014.
QUIZ: Which is the **safest** infant sleep environment?
Important Definitions

- **SIDS:** Sudden Infant Death Syndrome (no explanation for infant death)
- **SUID:** Sudden, Unexpected Infant Death (any sudden infant death, whether explained or unexplained)
- **ASSB:** Accidental suffocation and strangulation in bed (other sleep-related death, not SIDS)
Trends in SIDS and other Sleep-Related Deaths (1990-2006)

Trends in SIDS and other Sleep-Related Deaths (1990-2006)

Infant Safe Sleep Recommendations

- In 2011, the American Academy of Pediatrics released updated guidelines for infant safe sleep\(^1\)
  - *Update to “Back to Sleep”*

- Specific recommendations included:
  - *Infants should sleep alone (no bed-sharing)*
  - *Infants should sleep on their back*
  - *Infants should sleep in a crib or bassinette*

POLICY STATEMENT

SIDS and Other Sleep-Related Infant Deaths: Expansion of Recommendations for a Safe Infant Sleeping Environment

abstract

Despite a major decrease in the incidence of sudden infant death syndrome (SIDS) since the American Academy of Pediatrics (AAP) released its recommendation in 1992 that infants be placed for sleep in a non-prone position, this decline has plateaued in recent years. Concurrently, other causes of sudden unexpected infant death that occur during sleep (sleep-related deaths), including suffocation, asphyxia, and entrapment, and ill-defined or unspecified causes of death have increased in incidence, particularly since the AAP published its last statement on SIDS in 2005. It has become increasingly important to address these other causes of sleep-related infant death. Many of the recommendations from focusing only on SIDS to focusing on a safe sleep environment that can reduce the risk of all sleep-related infant deaths, including SIDS. The recommendations described in this policy statement include supine positioning, use of a firm sleep surface, breastfeeding, room-sharing without bed-sharing, routine immunizations, consider-
Always Remember the ABC’s

• Babies should sleep:
  – **ALONE**
    • Not with adults, other children, or pets
    • Not with toys, stuffed animals, blankets
  – On their **BACK**
    • Not on their side
    • Not on their stomach
  – In a **CRIB** or bassinette
    • Not in the parent’s bed or a sibling’s bed
    • Not in a couch or chair
    • Not in a car seat or carrier
Other Safe Sleep Recommendations

• Regular prenatal care for pregnant women
• Avoid smoke exposure during pregnancy and after birth
• Avoid alcohol and illicit drug use during pregnancy and after birth
• Breastfeed
• Avoid overheating
• Consider pacifier
• Immunize according to CDC/AAP schedule
• Avoid commercial “SIDS risk reduction” devices
Infant Safe Sleep Recommendations

• Higher risk of death associated with bed sharing

  – Overall odds of dying: 2.89 times greater

  – Odds of dying if infant <3 months old: 10.37 times greater

  – Odds of dying if mother smokes: 6.72 times greater

Bed-Sharing Practices in Alabama

- From 2009 Alabama Child Death Review:
  - 23 suspected SIDS cases reviewed
    - 10 infants (43.5%) sleeping in adult beds
    - 5 infants (21.7 percent) were not sleeping alone
  - 15 cases of suffocation-related deaths reviewed
    - Four cases (26.7 percent) reported to be sleep-related (e.g. bedding, overlay, wedged)
    - Six victims (40 percent) reported to be sleeping in an adult bed when the death occurred.
    - Two deaths (13.3 percent) occurred while a child was sleeping on a couch.

Bed-Sharing Practices in Tennessee

How often does your baby sleep in the bed with you or anyone else?

- Rarely: 27%
- Never: 30%
- Always: 12%
- Often: 13%
- Sometimes: 18%

Infant Safe Sleep Recommendations

- Higher risk of death associated with sleeping on side or stomach
  - Odds of dying if sleeping on side: **2.0 times greater**
  - Odds of dying if sleeping on stomach: **2.6 times greater**

Sleep Positioning in Alabama

Baby's Sleeping Position, Alabama PRAMS 2011

- Back: 65.5%
- Side: 17.1%
- Stomach: 17.5%

Position Most Chosen by Mother for Baby's Sleeping
(Question 57 of the PRAMS Survey)

Sleep Positioning in Tennessee

In which position do you most often lay your baby to sleep now?

- Back: 66%
- Side: 16%
- Stomach: 9%
- Mixed: 9%

What About Reflux?

• **All** babies reflux
  – *Babies have protective mechanisms to keep their airway safe*
  – *The back position is still the safest*

• Elevating the head of the bed is not recommended
  – *Does not help reflux*
  – *Baby may slide to foot of bed and compromise airway*

• **Rare** exceptions: example—compromised airway protective mechanisms (such as grade 3-4 laryngeal cleft before surgical repair)

What About Preterm Babies?

• Preterm infants are at increased risk of sleep-related deaths
• AAP recommends that preterm infants be placed on their back as soon as medically stable
  – *Well in advance of discharge home*
  – *By 32 weeks postmenstrual age*

• Make a point of educating families on the new position and why back sleeping is important

Myth Busters: Infant Sleep

• What is a good sleeper?
• When should my baby sleep through the night?
• But won’t my baby sleep better if I:
  – put rice cereal in the bottle?
  – put them to sleep on their stomach?

## “Normal” Sleep
In the First Year of Life

| First few weeks       | • Total sleep 16-20 hours/day  
<table>
<thead>
<tr>
<th></th>
<th>• Sleep 1-4 hours, then awake for 1-2 hours</th>
</tr>
</thead>
</table>
| **At 4 weeks**        | • Sleep longer night periods  
|                       | • Longer wakefulness during early evening  
|                       | • Sleep consolidates at 4-6 wks |
| **At 3-5 months**     | • Settle into routine  
|                       | • Sleep longer stretches at night, 5-6 hours |
| **By 9 months**       | • Most babies sleep through the night  
|                       | • Two daytime naps |

The “Lake Wobegon” Effect: “But the Parents I Know….”

*Predicted SIDS mortality rates for a cohabiting, white mother age 26 to 30, having a second normal weight baby with birth weight between 2.5 and 3.5 kg and having no other risk factors, that is mother is not a drug user, has a partner and room shares. Bot, bottle; Br, breast; SIDS, Sudden Infant Death Syndrome.

Tennessee Public Health Efforts to Prevent Sleep-Related Infant Deaths
Overview:
Tennessee’s Safe Sleep Efforts

• 2012
  – Analysis of various data sources
  – Development of statewide Safe Sleep campaign

• 2013
  – Evaluation of broad public awareness campaign
  – Engagement of other key partners

• 2014
  – Launch of Hospital Safe Sleep Project
Data Sources: Tennessee Department of Health; Division of Policy, Planning and Assessment; Office of Health Statistics; Birth and Death Statistical Systems and Tennessee Vital Statistics Annual Bulletins. Starting in 1934, data are restricted to TN residents.
Multiple Data Sources Illuminate the Problem

Tennessee Infant Deaths

- 2005: 657 (61 Sleep-Related, 616 All Other Causes)
- 2006: 649 (84 Sleep-Related, 565 All Other Causes)
- 2007: 613 (105 Sleep-Related, 508 All Other Causes)
- 2008: 570 (116 Sleep-Related, 454 All Other Causes)
- 2009: 526 (129 Sleep-Related, 397 All Other Causes)
- 2010: 495 (131 Sleep-Related, 364 All Other Causes)

Current Sleep Position

- Back: 66%
- Side: 16%
- Stomach: 9%
- Mixed: 9%

Bed Sharing

- Rarely: 27%
- Sometimes: 18%
- Often: 13%
- Always: 12%
- Never: 30%

Contributors to Sleep-Related Deaths

- Infant found sleeping not in a crib: 86.3%
- Infant sleeping with other people: 76.3%
- Infant not sleeping on back: 43.5%
- Unsafe bedding or toys in sleep area: 29.0%
- Obese adult sleeping with infant: 9.9%
- Alcohol-impaired adult sleeping with infant: 6.1%
- Drug-impaired adult sleeping with infant: 3.8%

Vital Statistics & Child Fatality

- PRAMS
- Child Fatality

PRAMS
Why Focus on Safe Sleep?

*If we could eliminate these preventable sleep-related deaths, we would move from the bottom five states in infant mortality to the national average!*
Data Illuminates…. but the Heart Motivates

Tennessee Infant Deaths

- **Infant Mortality Rate:** 7.9
- **Infant Mortality Rate:** 6.2
- **Number of Infant Deaths:**
  - 2010: 495
  - Theoretical: 495

**Elimination of all 131 sleep-related infant deaths**

131 children = equivalent of six kindergarten classrooms
Broad Public Awareness Campaign

Website: http://safesleep.tn.gov

Safe Sleep For Your Baby

Did You Know?

Every year, many Tennessee babies die from sleep-related causes. Most of these deaths are preventable.

The following practices in preventing sleep-related deaths are recommended by the American Academy of Pediatrics:

- Always place baby on back to sleep at night and nap
- Do not smoke
- Do not use bumper pads or pillows in crib
- No toys in crib
- Put baby to sleep in crib
- Put baby on back to sleep
- Use a tight fitting sheet

Tennessee Department of Health

Remember the ABC's of Safe Sleep:

Babies should sleep alone, on their Back, and in a Crib.

safesleep.tn.gov
Material Distribution

- Regional and local health departments
- Hospitals
- Pediatrician offices
- OB offices
- Daycares/child care centers
- Child welfare
- SafeKids Coalitions
- March of Dimes
Evaluation of Awareness Campaign

• Parents (N=1,372)
  - 65% reported making changes based on the campaign message
    • Over half that made changes removed pillows and fluffy bedding from the infants sleep area

• Grandparents (N=284)
  - 52.5% reported making changes
    • Over 40% talked to their son or daughter and almost 1/3 removed fluffy blankets and bedding

• Child Care Providers (N=102)
  - 72.5% reported making a change
    • Over half talked to a parent about safe sleep
    • About 1/3 reported removing pillows or fluffy bedding and 1/3 also reported changing a baby’s sleep position
Key Partnership: WIC

- State-level initiative
- Idea from Division-wide meeting on Safe Sleep
- Printed on ~38,000 vouchers per month
Key Partnership: Welcome Baby

- Universal outreach program to all new parents
  - Funded with MIECHV funds
  - All packets contain safe sleep information
- Low risk receive packet by mail
- Medium risk receive phone call
- High risk receive a home visit with education and promotional items such as a onesie with a safe sleep message
Key Partnership: Hospitals

• Hospitals commit to:
  • Develop/implement safe sleep policy
  • Educate staff at least annually
  • Monitor compliance quarterly

• Partner hospitals will receive:
  – **Free** “Sleep Baby, Safe and Snug” board book *for each birth*
  – **Free** TDH “ABCs of Safe Sleep” materials
  – **Free** educational flipchart
  – **Free** Recognition on TDH website
  – Signed certificate from TDH Commissioner
  – Press release template

All 66 birthing hospitals participating!
Why Focus on Hospitals?

• Because the AAP says so!
  – AAP recommends that health care professionals endorse risk-reduction strategies

• Because we can impact the families of almost every baby born in Tennessee
  – Nearly all (98.7%) of Tennessee births occur in hospitals\(^1\)

Source: Tennessee Department of Health, Division of Policy Planning and Assessment.
Why Focus on Hospitals?

- Health care providers may not always provide the most up-to-date information or model correct safe sleep practices
  - 2006 study: Only 52% of NICU nurses provided discharge instructions for exclusive back sleeping
  - 2007 study: Only 74% of pediatricians and 62% of family physicians recommended exclusive back sleeping
  - 2009 study: 72% of nurses knew back sleeping protective for SIDS; only 30% regularly placed infants on back

Real Examples from TN Hospitals
Why Focus on Hospitals?

• What parents see matters!
  – 1998 study: Among parents who observed stomach sleeping in hospital, 93% intended to place infant on stomach at home\(^1\)
  – 2001 study: Parents who saw exclusive back sleeping in nursery more likely to put baby on back at home\(^2\)

Why Focus on Hospitals?

• Because hospital-based interventions can make a difference!
  – Large metropolitan level II nursery: NICU staff education and trigger tool and rapid-cycle change → increased use of appropriate bedding and parent education¹
  – Large TX NICU: Safe sleep algorithm, crib card, education for staff/parents, crib audit tool, and postdischarge telephone reminders → increased supine positioning; improved parental compliance
  – York, PA hospital: Educational DVD, face to face review with nurses, parental acknowledgement statement → improved parental intent for supine positioning and use of crib/bassinette; improved understanding of AAP guidelines

Every Baby Deserves a First Birthday!

Learn about behaviors, lifestyle choices and conditions that impact birth outcomes and a healthy life. Find out what you can do to ensure babies in your community get to celebrate a first birthday!

**Risks for increased infant mortality**
- Low birthweight
- Preterm birth
- Lack of prenatal care
- Tobacco use – mother or household
- Sleeping on stomach or side

To help baby sleep safely, remember A, B, C:
- **A** – ALONE (no bed sharing)
- **B** – BACK – Place on back to sleep
- **C** – CRIB – Sleeps in crib with firm mattress (not an infant carrier, adult bed, couch, or other soft surface)

Spread the word about the importance of a healthy pregnancy, correct sleep positioning, and a safe sleep environment!

Baby Thoughts

- Please do not sleep with me in the bed while we are here at the hospital or when we go home. This is the safest thing for me.
- My mattress should be firm, not soft and squishy.
- Back is best! That’s how I should be when I am sleeping.
- No stuffed animals in my crib please. I’ll play with them when I’m older.
- One layer of clothing and one blanket is all I need to keep me warm. If you think I need more, ask my nurse.

Key Partnership:
Local Communities
Funding Sources

• HRSA
  – Maternal and Child Health Block Grant
  – Early Childhood Comprehensive Systems (ECCS)

• CDC
  – Core Violence and Injury Prevention Grant (sleep-related deaths are one of four priority areas)

• Other Sources
  – Fetal Infant Mortality Review (Medicaid administrative match)
  – Community foundations
  – Corporate partners
Key Lessons Learned

• Utilize data to identify risk factors and develop campaign focus – Sources include Child fatality, PRAMS, vital records
• Gather input on campaign materials early in process
• Capitalize on multiple funding sources
• Engage diverse set of community partners
• Keep campaign fresh
PRELIMINARY Data: SUID Reduction

Number of Sleep Related Infant Deaths, 2012-2013

- SIDS
- Suffocation
- Undetermined

2012:
- SIDS: 9
- Suffocation: 25
- Undetermined: 91

2013:
- SIDS: 15
- Suffocation: 14
- Undetermined: 72

18% decrease from 2012 to 2013
Infant Mortality Trends 2005-2013

Tennessee vs. United States

- Tennessee
- United States

- 15% Over 5 years
- 144 fewer infant deaths

Safe Sleep For Your Baby

Did You Know?

Every year, many Tennessee babies die from sleep-related causes.
Most of these deaths are preventable.

The following guidelines to prevent sleep-related deaths are recommended by the American Academy of Pediatrics:

- Always place babies on their backs to sleep on a flat and firm surface.
- Babies who sleep on their backs are less likely to die of Sudden Infant Death Syndrome (SIDS).
- Babies should always sleep in a crib. The safest place for a baby is in a separate room or in the parents' room to keep a close eye on them.
- Keep loose objects, such as soft toys, and bedding out of the baby's sleep area. Do not use pillows or blankets in a baby's sleeping area. A baby should sleep in a crib with only a tight-fitting sheet.
- Avoid putting your baby overheat during the night. A baby should be dressed lightly for sleep. The room temperature in a range that is comfortable for a lightly clothed adult.
- Do not use crib bumpers. These do not reduce injuries and can cause suffocation.
- Avoid smoking. Both maternal smoking during pregnancy and secondhand smoke after birth should be avoided.
- Breastfeeding is recommended for at least the first six months of life. Breastfeeding is associated with a reduced risk of SIDS.

Remember the ABC's of Safe Sleep:
Babies should sleep Alone, on their Back, and in a Crib.

Did You Know?

Babies should sleep **ALONE**, on their **BACK** and in a **CRIB**.

133 babies died in Tennessee in 2010 from sleep-related deaths.

Most of these deaths were preventable.

Check the tips you currently use to see how you rate.

- Do not smoke
- No toys in crib
- Put baby to sleep in crib
- Put baby on back to sleep
- No bumper pads or pillows in crib
- Use a tight fitting sheet
- Do not overhear or overdress
- Baby should sleep on a firm mattress

Safe Sleep Checklist
NICHD “Safe to Sleep” Campaign

• Expansion of original “Back to Sleep” campaign which started in 1994
• Since start of original campaign:
  – SIDS rate declined by almost 50%
  – Increase in percentage of babies put to sleep on back
• Incorporates latest AAP recommendations for infant safe sleep
• Website: http://www.nichd.nih.gov/sids/
Safe Sleep For Your Baby

What does a safe sleep environment look like?

1. Use a firm sleep surface, such as a mattress in a safety-approved crib, covered by a fitted sheet.
2. Do not use pillows, blankets, sheepskins, or crib bumpers anywhere in your baby’s sleep area.
3. Make sure nothing covers the baby’s head.
4. Always place your baby on his or her back to sleep for naps and at night.
5. Dress your baby in light sleep clothing, such as a one-piece sleeper, and do not use a blanket.
6. Keep soft objects, toys, and loose bedding out of your baby’s sleep area.
7. Do not smoke or let anyone smoke around your baby.
8. Baby should not sleep in an adult bed, on a couch, or on a chair alone, with you, or with anyone else.

For more information on crib safety guidelines, contact the Consumer Product Safety Commission at 1-800-638-2727 or http://www.cpsc.gov.

Safe to Sleep

Seguro al Dormir

Reduce the Risk of Sudden Infant Death Syndrome (SIDS) and Other Sleep-Related Causes of Infant Death

Reduce el riesgo del síndrome de muerte súbita del bebé y de otras causas de muerte relacionadas con el sueño
