

# ALABAMA STD SNAPSHOT 2010-2018

Minimum and maximum rates have been labeled in each chart. Alabama trends shown in **RED** are greater than the national rate. Rates are defined as the number of new cases of a disease within a time period, as a proportion of the number of people at risk for the disease. Primary and secondary syphilis are the most infectious stages of syphilis. "All Syphilis" rates include congenital syphilis.
